Capgemini

Cyber Services – Remote Capabilities
Achieve cyber resiliency

Our Cyber Services – Remote Capabilities are here to ensure your organization's cyber resiliency. We understand how to help navigate business disruption while ensuring your mission. As a partner, we want to help you focus on business continuity while we assist in keeping your organization safe. We have established a set of targeted services in these areas: **Application and Infrastructure Protection, Incident Response, Managed Detection and Response, Device Management, Threat Hunting and training**. These can be implemented remotely and support your workforce's transformation from premises -focused to remote-focused cybersecurity.

How can we help? We have capacity and technical resources that can be applied remotely. If you need additional support to run cyber operations, additional eyes to help your analysts, need always-on support, or platform management and monitoring expertise, resources are available.

We are in this with you for the long haul, fully realizing this is a critical time for your cybersecurity as your operations adapt. We have earned your trust and now commit to enable your cybersecurity resilience. We welcome the opportunity to discuss your specific needs and how you can take advantage of our services.

Our offerings

Training and Workshop Services
Capgemini can provide timely remote training workshops that will enhance your operational readiness across your organization. We can provide tailored workshops for technical issues that your teams may be experiencing in real time. Capgemini can provide enhanced security training and awareness programs that reinforce key security messages, cyber hygiene, and best practices when employees are working from home.

Application and Infrastructure Protection
With work at home becoming the new norm, VPN and remote-access environments will inevitably become stressed and vulnerable. Capgemini can scan, monitor, execute health checks, and evaluate the security architecture of our clients. Deficiencies can be identified and remediated. Best practices can be implemented and controls can be secured.

Incident Response Services
Can your organization execute an incident response plan with 100% confidence? If there is a breach or issue, Capgemini's Incident Response Service can remotely diagnose problems, review logs and data, and provide remediation steps and guidance. Our team can also review existing plans and offer improvements and recommendations.

Managed Detection and Response (MDR)

We have the capability to remotely monitor and secure your network. Working with your team remotely, we can provide a comprehensive suite of advanced metrics and reporting to enable accurate measurement of threat, risk, impact, and effectiveness.

Device Management Services

Our solution includes design, implementation, end-to-end management, and operations support of your most critical devices. Additionally, our security device experts help optimize your operations and ensure your device is secure. This includes monitoring and triage, 24x7 remote support, incident management, and administration (adds/moves/changes).

Threat Hunting

Organizations can no longer rely on set-and-forget tools; they must actively hunt to uncover adversary activity. Our remote service utilizes four techniques to uncover latent intrusions and reduce dwell time, while providing five key measurements.
