

BI Foundation Adoption for Oracle

A Capgemini Business Information Management (BIM) offer designed to help Oracle customers successfully migrate to Oracle Business Intelligence Foundation

The Challenge

Oracle BI Foundation can deliver a step change to your Business Analytics. It encompasses the latest state-of-the-art BI tools that we see changing user perceptions, achieving significantly higher user adoption and satisfaction rates. It is also a truly integrated platform bringing all the benefits of an integrated information model, system management tools, security and deployment processes. As a result it is delivering lower TCO and proving faster and more flexible in deployment. With the added benefits of best-in-class lifecycle management it looks to be the go-to platform. But implementing it poses a number of challenges. Firstly building a business case for migrating from one BI solution to another is difficult. There are also risks in doing it as with changing any technology in an already complex IT landscapes. Next is finding the resource to do it; many organizations just don't have the bandwidth to tackle the problem. Finally there is the cost and whilst the benefits are strong keeping the cost down will be important to all organizations.

The Solution

The Capgemini BI Foundation Adoption for Oracle offer is designed to help Oracle customers through the process. It clearly identifies the right Oracle BI components to deliver business benefits, ensures the appropriate technology architecture is in place and manages any additional technology and business infrastructure needed in order to deliver a successful solution. Once a clear roadmap has been defined and agreed, the migration process can be executed from our local teams or our tried and tested Rightshore® capability, which provides a scalable, reliable and cost effective approach to transition.

The Benefits

This structured approach will identify the potential business benefits, build the technology roadmap, and make sure that the desired business outcomes are delivered. Our approach will ensure this is done with minimum business risk and disruption and with an effective but low cost delivery.

The Route to Successful Deployment

We take you through a 3-step process to achieve the migration:

1. BI Deployment Design

It is essential to start with a BI technology roadmap which identifies the relevant BI component for each business information requirement. This roadmap will drive the definition of the benefits realization. It will identify both business quick wins and will set the agenda for longer term strategic business information goals.

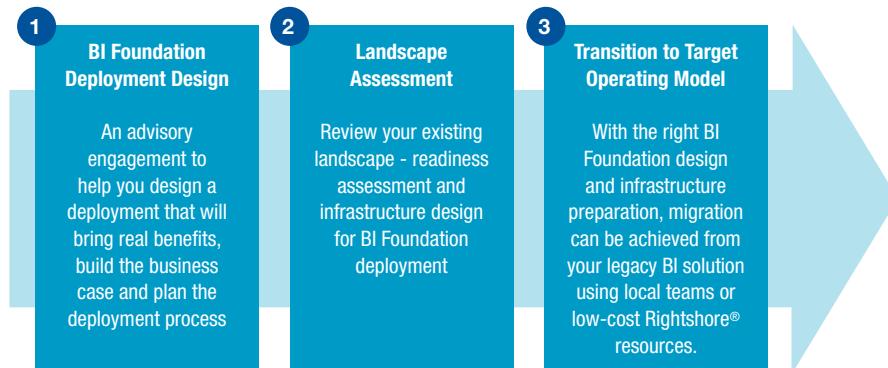

We will use our extensive experience of how to deliver value from Oracle BI to guide you through building a robust business case and deployment plan.

2. Landscape Assessment

The preparation of the IT Landscape is important. Most organizations already have complex IT landscapes and adding another technology needs to be well planned. We will review the existing landscape, assess where rationalization and retirement of legacy solutions can be achieved and ensure a robust scalable platform for BI is in place.

3. Transition to Target Operating Model

Once the basis for migration is firmly established; the business case and roadmap are in place and the IT landscape is aligned then it becomes easy to industrialize the transition. The reporting requirements will have been assessed and rationalized through the deployment design stage. Reports will either be migrated to the

Capgemini Enterprise Delivery Model and Rightshore®

Capgemini has a unique approach which industrializes the delivery of BIM, based on a Service Center approach which engages both Business and IT in managing information assets. This approach also draws heavily from our Rightshore® model that balances local and offshore resources to deliver comprehensive but affordable solutions

About Capgemini

With more than 115,000 people in 40 countries, Capgemini is one of the world's foremost providers of consulting, technology and outsourcing services. The Group reported 2010 global revenues of EUR 8.7 billion.

Together with its clients, Capgemini creates and delivers business and technology solutions that fit their needs and drive the results they want. A deeply

new landscape or new ones built. This can be by local teams or a distributed delivery leveraging our Rightshore® BI factory. This provides a highly scalable solution and can deliver fast, high quality and low cost migration. We will also be able to establish a BI Service Center that will be able to service future needs for BI development.

Why Capgemini?

Capgemini provides access to globally based BIM skills and resources, combining expertise in information strategy and business consulting with a deep understanding of technology, to ensure seamless and effective implementation. Our strength in Oracle BI, together with our experience of delivering successful Oracle BI Foundation migrations, means we are much more than just a safe pair of hands. Capgemini has over 6,000 skilled BIM practitioners, 1,700 of whom work in our BIM Center of Excellence in India, part of our Rightshore® model.

Next Steps

Let us help you get the best out of your Oracle investment by leveraging the latest Oracle BI technologies to deliver real business benefits whilst maintaining business continuity.

multicultural organization, Capgemini has developed its own way of working, the Collaborative Business Experience™, and draws on Rightshore®, its worldwide delivery model.
