

Cut Your Costs, Not Your Potential

Introducing Capgemini's Application Lifecycle Services for the Public Sector

Think your application landscape is too complex?

Your application spend too high?

Your application development too manual?

Your application renovation too slow?

After decades of unbridled application building, most Public Sector organizations have created an overwhelming application city with narrow streets, traffic jams and burdening complexity. What opportunities are there for improving your applications landscape? For many Public Sector organizations, complex applications, high IT spend, overly manual development, and slow application renovation represent a significant challenge.

A complex applications environment results in high costs and error rates, and inhibits better collaborative working across agencies. This is not sustainable. The sector is under intense pressure to deliver substantial efficiencies, and improve service consistency and quality for customers.

Given the significant investments made in technology over recent years, the challenge for technology leaders is to ensure those investments are the right ones to enable this transformation.

Where do you start? How do you overcome an applications landscape characterized by multiple overlapping and, at times, outdated core business, customer-facing, and corporate support applications? The challenge multiplies when we add to this the need for multi-unit collaboration, customer focus, and increasing use of social networking technologies that all demand the alignment of applications.

With long-standing and proven partnerships across the Public Sector, Capgemini has developed an Application Lifecycle Services approach designed to help you address these specific challenges.

Capgemini's revolutionary Application Lifecycle Services facilitate Public Sector organizations to rationalize their application landscape, build a new city in the old one.

Capgemini commits to deliver hard results along three measurable promises:

- **Most Productive**
- **Most Flexible**
- **Most Impactful**

Most Productive

Our global sourcing model along with consistent industrialization can secure a reduction in your application costs of up to one-third or more.

Superior industrialization:

Through standardization, reuse and self-automation in application development, testing and maintenance to reduce costs and increase quality.

Clients receive end-to-end services in a predictable cost and resource efficient manner for most industry leading COTS (commercial off-the-shelf software) applications.

Lean principles:

Lean principles applied to deliver continuous improvement of applications, innovate and simplify for a reduced number of tickets, shorter response times and better functionality.

Custom public sector templates cover a wide range of processes, providing clear and up-to-date information for streamlined management of both operational and strategic projects. Capgemini has an impressive track record in using an ecosystem approach to achieving successful Public Sector Lean transformation and has transferred Lean knowledge in high volumes to rapidly build a sustainable capability in government departments. This is also backed up by a risk-sharing commercial model in many cases.

Rightshore® delivery:

Applying the right specific mix of local and international sourcing, to offer you the lowest costs with the best capabilities.

Capgemini harnesses a global network of Public Sector Centers of Excellence across Europe, North America and APAC and will propose the right mix of onshore and offshore resources balancing customer interaction and cost (where policy allows).

Most Flexible

Variable application costs and adaptable business services to improve your agility with an end-to-end time reduction of up to one-third.

Adjustable scope:

Adjustable scope of services that meets your business needs while complying with budgets and responding to quickly changing market circumstances.

This means that Public Sector players may consider major, evolutionary or modular transformation with us. Our managed business service for healthcare is a good example of how we can engage with clients in a flexible way.

Collaborative-governance:

Collaborative-governance that leverages our 'One Team' approach to ensure effective communication, business-aligned SLAs, the shortest time-to-market and mutual trust.

From strategy development through implementation, our Public Sector clients benefit from our tailored approach. Working beside you every step of the way, we analyze your challenges, leverage our collaborative tools and guide you through your transformation.

Architected for change:

Architected for change, steadily building a much simplified, flexible applications platform applying standard solutions, SOA, and cloud-based delivery.

We provide reference models and worldwide gained best practices. This includes a comprehensive set of business processes, reference architectures, pre-configured software packages to guarantee agility, reduced IT system complexity and improved TCO, and enable acceleration with implementation confidence.

Most Impactful

Application Lifecycle Services closes the circle from IT to business which boosts value and increases your potential with up to one-third.

Portfolio Management:

Portfolio Management of initiatives, applications and vendors to allow the business to focus on core activities while being briefed on performance and improvement potentials.

Through experience with application transformation initiatives, we have found that the most successful model is to develop an application rationalization framework. This results in cost savings, improves application effectiveness and helps Public Sector companies succeed in today's volatile markets. Our ecosystem approach is proven to provide enhanced efficiency, flexibility, and increased quality assurance.

Specialized Public Sector solutions:

Specialized sector solutions that are based on global best practices and reuse, to maximize the business impact of processes and applications.

Capgemini has developed a suite of solutions tailored to the Public Sector that span central and local administration: most notably in the area of corporate services, and increasingly in primary business areas across local administration, healthcare, tax, public security, defense, welfare, and education.

Powering transformation:

Powering transformation by managing the application lifecycle from the business perspective to provide measurably more head room for innovation and growth.

Our ability to advise on business directions through our Public Sector consulting organization allows us to address application transformation supporting client's most critical strategic and operational objectives. The consulting practice combines functional consulting skills with sharp industry knowledge to well position our clients whatever their objectives are in the converging Public Sector world.

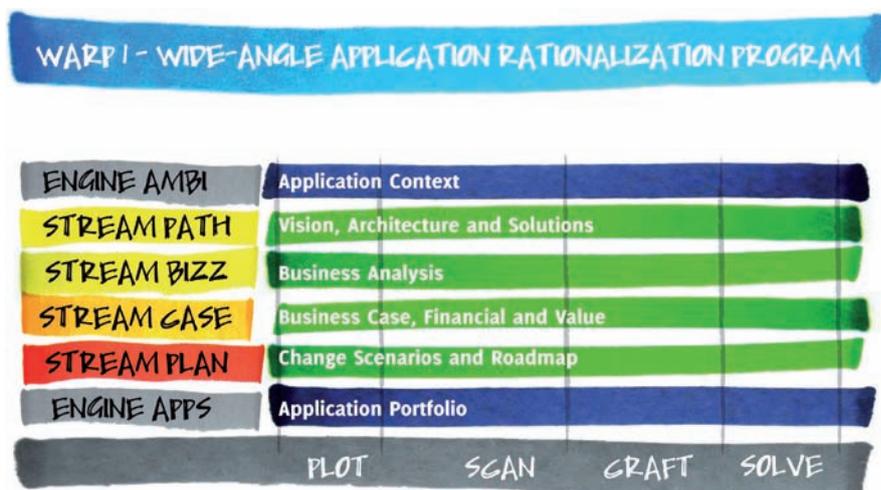

A breakthrough, accelerated approach that brings Public Sector organizations up to full speed in rationalizing your application landscape and lifecycle

WARP 1 combines highly-industrialized scans of the application portfolio and application context with an architected, business-oriented view. It gives you the hard facts that you need to make substantiated decisions about how to simplify, standardize, and renew. You will find the way to cost effectiveness, better responsiveness, and more business impact. More importantly, WARP 1 delivers the commitment and mobilization in your organization to take tangible steps forward.

Ready to start a simplification journey with Capgemini?
