

Successful SAP Adoption of SAP BusinessObjects Solutions

A Capgemini Business Information Management (BIM) offer designed to help SAP customers successfully adopt the latest SAP BusinessObjects technologies

Capgemini Enterprise Delivery Model & Rightshore®

Capgemini has a unique approach which industrializes the delivery of BIM, based on a Solution Center approach which engages both Business and IT in managing information assets. This approach also draws heavily from our Rightshore model that balances local and offshore resources to deliver comprehensive but affordable solutions.

The Challenge

“We know that the SAP BusinessObjects portfolio offers organizations significant benefits if exploited effectively. Not only is it SAP’s strategic information and BI toolset but it offers the possibility of unlocking the potential of information within their ERP and BW platforms to drive more effective business decision making. However the adoption journey is not without technical and business risks and must be linked to a coherent business case driven by achieving focused business outcomes”

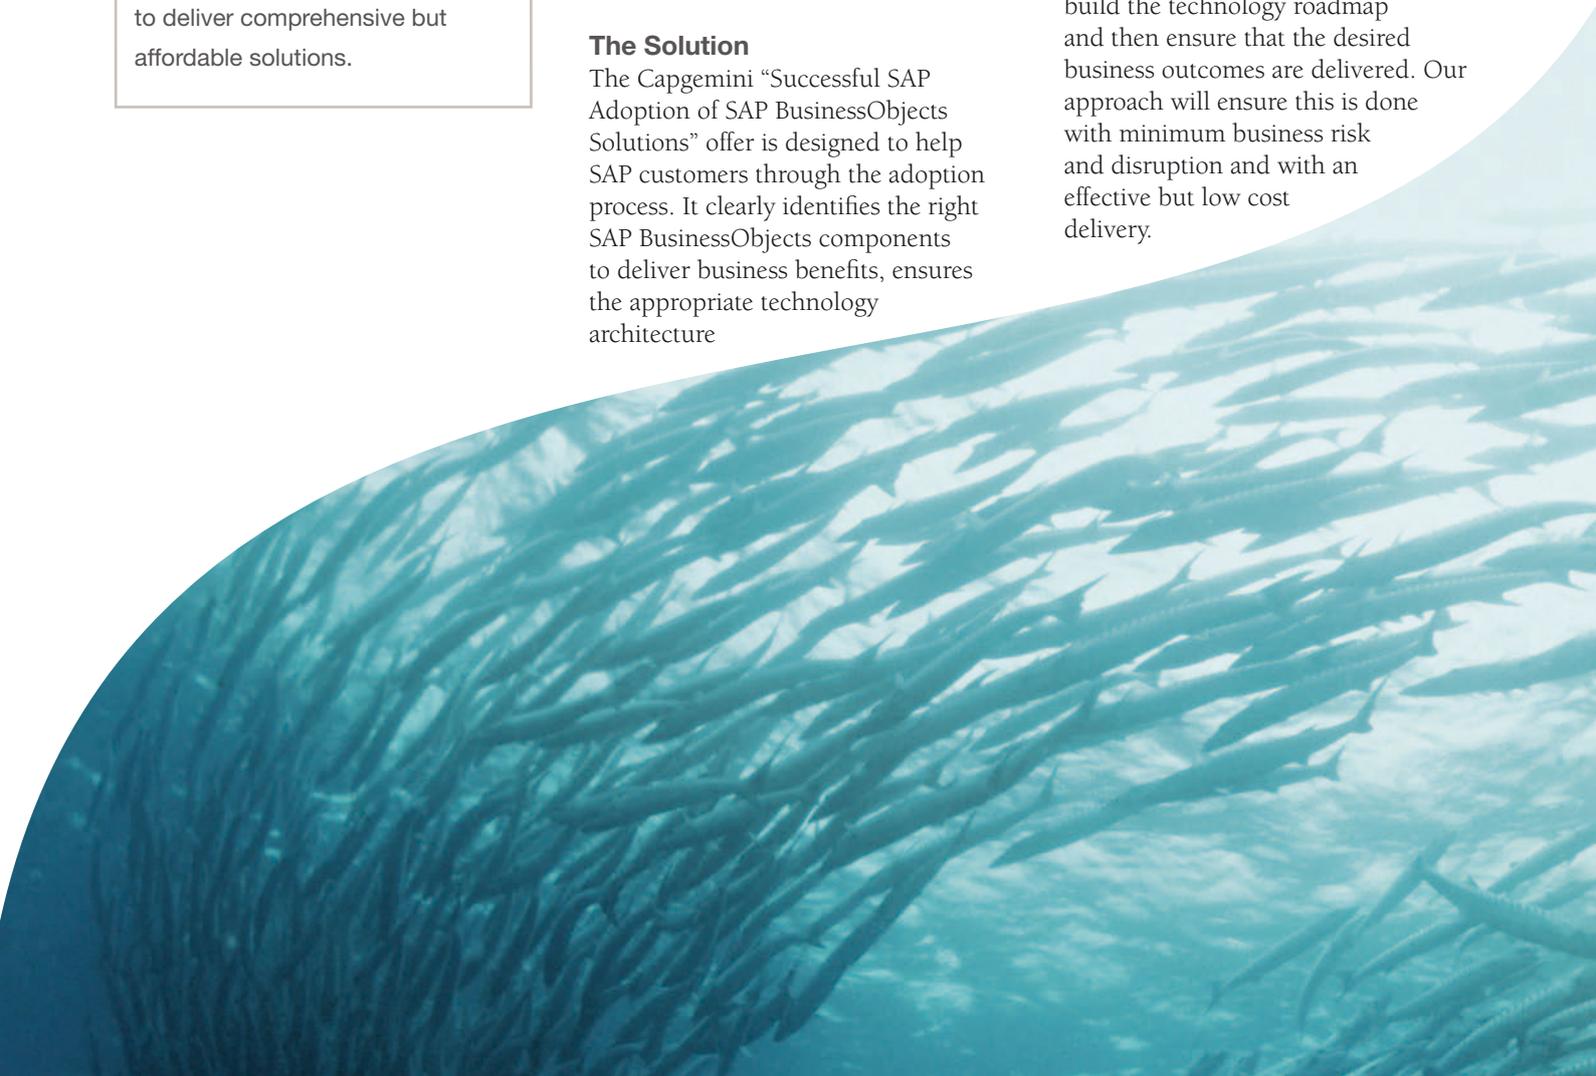

The Solution

The Capgemini “Successful SAP Adoption of SAP BusinessObjects Solutions” offer is designed to help SAP customers through the adoption process. It clearly identifies the right SAP BusinessObjects components to deliver business benefits, ensures the appropriate technology architecture

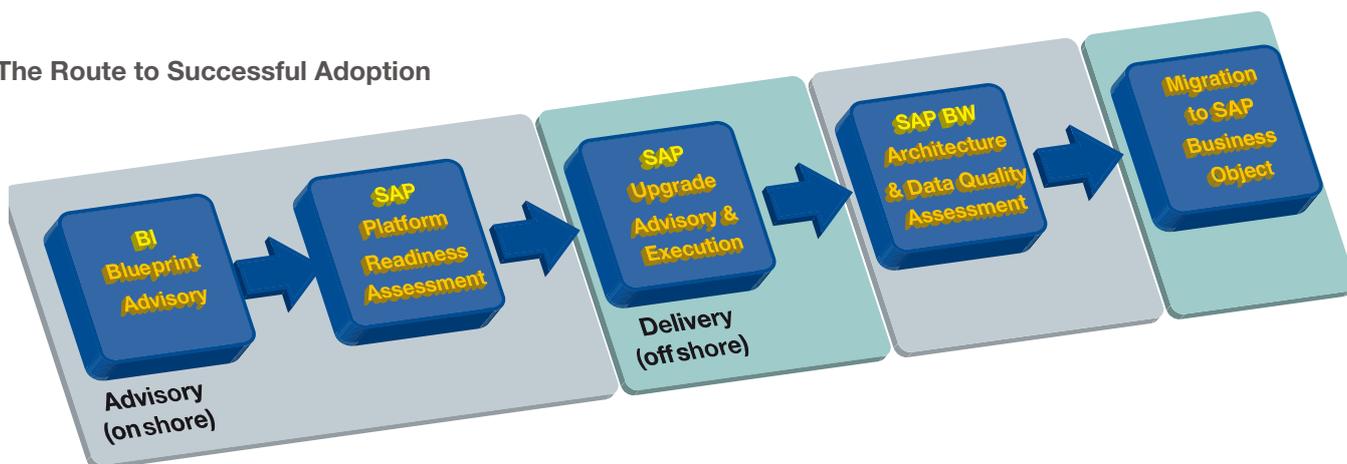

is in place and manages the need for any additional technology and business infrastructure in order to deliver a successful solution. Once a clear adoption roadmap has been defined and agreed, the migration journey can be executed through our tried and tested Rightshore® capability, providing a scalable, reliable and cost effective transition approach.

The Benefits

This structured approach will identify the potential business benefits, build the technology roadmap and then ensure that the desired business outcomes are delivered. Our approach will ensure this is done with minimum business risk and disruption and with an effective but low cost delivery.

The Route to Successful Adoption

1. BI Blueprint

It is essential to start with a BI Blueprint which identifies the relevant SAP BusinessObjects component for each business information requirement. This will drive the definition of the benefits realization. It will identify both business quick wins and will set the agenda for longer term strategic business information goals.

2. SAP Platform Readiness Assessment

The preparation of the platform is important. The right SAP release, support pack level and components on the SAP NetWeaver Business Warehouse (SAP NetWeaver BW) component and the wider landscape will ensure the basis of an efficient transition. It is also necessary to define what additional infrastructure is needed to support the SAP BusinessObjects components.

3. SAP Upgrade

Capgemini can also provide assistance or execute your SAP upgrade. Capgemini has a well established SAP upgrade offering which is delivered via our Rightshore® distributed delivery approach.

4. SAP NetWeaver BW Architecture & Data Quality Assessment

SAP BusinessObjects components offer an array of new ways in which to access information. In many cases the existing BW solution architecture (cube design) will support these but sometimes it may be necessary to optimize the architecture to enable maximum benefits of the new components. Also as the scope opens to wider integration of information sources, it is prudent to assess data quality to ensure trustworthy information is being delivered to the business.

5. Migration to SAP BusinessObjects Solutions

Once the basis for migration is firmly established via stages 1-4 it becomes easy to industrialize the transition. Reports to be migrated can be run through the Capgemini Rightshore migration factory.

Why Capgemini

Capgemini provides access to globally based Business Information Management (BIM) skills and resources, combining expertise of information strategy, business consulting and deep technology understanding to ensure seamless and effective implementation. Our strength in SAP BI and SAP BusinessObjects BI solutions, together with our experience of delivering successful SAP BusinessObjects migrations means we are much more than just a safe pair of hands. Capgemini has over 4000 skilled BIM practitioners of which 1000 are part of our BIM Center of Excellence in India as part of our Rightshore® model.

Next Steps

Let us help you get the best out of your SAP BI investment by leveraging the latest SAP BusinessObjects BI solutions technologies to deliver real business benefits whilst maintaining business continuity.
