

Migrating to HANA with Capgemini

Many organisations are currently contemplating a move to HANA, but they need help from people who've done it before. Capgemini has the tools, experience and expertise to ensure a smooth journey.

The drive towards HANA – and why you need help

Many organisations are attracted to HANA – and no wonder. The new suite built on SAP's advanced in-memory database offers a platform for digital transformation and the ability to drive instant value across all lines of business and all industries.

Depending on their starting position and requirements, customers face a variety of migration journeys. In each case, they need to draw on HANA expertise to optimise and de-risk this transformation – and that expertise can be hard to find.

Capgemini accelerates and de-risks migration

We've drawn on our already substantial experience of HANA migrations to create a framework that enables rapid, predictable migration. Capgemini's specially developed tools within the framework support and accelerate not just technical migration but also migration of business processes and the overall systems landscape. Capgemini's unique tools include:

Migration path accelerator tool that recommends a transformation approach based on the client's start point and optimum future SAP architecture

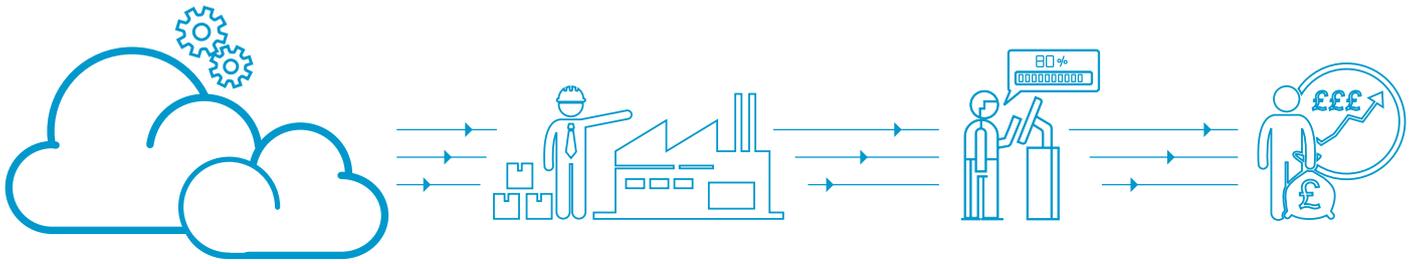

Fit-gap analysis tool to assess impact on business processes ahead of migration

Custom code analysis tool to identify code that will be affected by migration and assess it for code violations

Auto-remediation tool that assists with the process of fixing custom code during migration

Benefits of collaborating with Capgemini

With our tools and services, you can:

- **migrate faster** – with less effort and a shorter elapsed time
- **migrate better** – with less risk and fewer defects

This means you get to your destination with less effort and expense, and better-quality results.

Client experience shows our approach can reduce:

Success story: getting a HANA migration back on track

A major logistics provider recently asked Capgemini for help with a HANA migration project that had fallen behind schedule. We carried out an assessment identifying where effort needed to be directed. Our auto-remediation tool reduced build time by 50%. As a result, the migration completed on time and the resultant solution went live with no technical defects.

Next steps

Whatever your starting position and requirements, we can accelerate and streamline your journey to HANA. Contact us to find out more about our approach to HANA migration and our wider range of offers to help you use cloud as a platform for transforming your business.
