

Simplifying enterprise mobility with Oracle

Capgemini's delivery expertise enables enterprises to successfully adopt Oracle Mobile Solutions

With the massive increase in smartphone and tablet use across all industries, people are discovering new ways of working. This trend is reflected in the staggering number of mobile apps now available. Apple's App Store has around 1.5m apps, while the Google Play Store has around 1.4m.

The Oracle Mobile Solutions suite simplifies enterprise mobility by providing a complete set of solutions. Whether you are looking for new mobile applications or want to make existing enterprise applications available for mobile access, Capgemini can help you meet your needs by implementing Oracle Mobile Solutions.

People matter, results count.

Oracle Mobile Solutions

The Oracle Mobile Solutions suite incorporates three distinct capabilities: Oracle Mobile Platform to support the development of custom apps; Oracle Mobile Security Suite for protecting corporate data, especially with respect to “bring your own device” (BYOD) adoption; and a set of Mobile Apps for Oracle E-Business Suite (i.e. ERP) clients.

Each of these three capabilities is described in more detail below.

Capgemini’s delivery expertise

Capgemini has extensive knowledge and delivery expertise across the entire Oracle Mobile Solutions product range. This enables us to offer a range of services to help enterprises successfully adopt Oracle Mobile Solutions.

We have invested in building knowledge of, and delivery capabilities for, the Oracle Mobile Platform. Through our Oracle Delivery Unit, we offer services that allow organisations to evaluate their mobility options, streamline and secure their internal business processes, and improve employee productivity.

We can install, test and deploy Oracle’s standard Mobile Apps for you. We can also develop bespoke iOS or Android apps on the Oracle Mobile Platform to suit your business’s specific requirements. With our help, you can offer your users an omni-channel experience, where they can transition seamlessly between PCs, tablets and smartphones.

Oracle Mobile Platform – extending enterprise applications to mobile devices

Enterprises need a facility for creating and delivering engaging user experiences on a secure platform for any application or device, and around any data. To build mobile applications for enterprise systems, developers must be able to easily define mobile interfaces and APIs, and to extend applications to

access enterprise data and back-end services in the cloud.

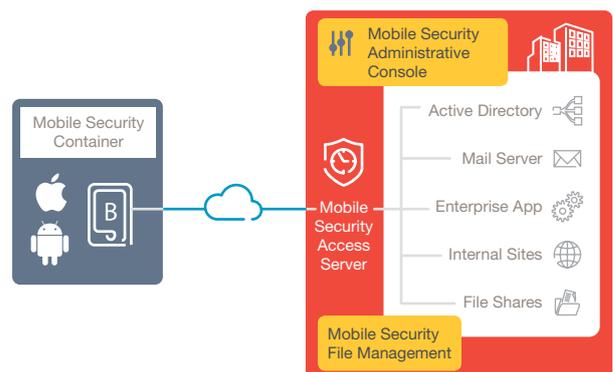

Oracle Mobile Platform provides these capabilities, enabling developers, IT and business to deliver highly engaging mobile and cross-channel experiences.

Oracle Mobile Security Suite (OMSS) – securing devices and corporate data

The proliferation of mobile devices and increased BYOD adoption make it imperative that enterprises safeguard corporate resources when they are accessed via these less secure consumer devices.

Older solutions like Mobile Device Management (MDM) required consumer devices to be locked down using device-level PINs and VPN software to provide control and security. This created privacy and usability issues as consumer devices were required to always adhere to corporate policies, even during personal use.

OMSS overcomes these challenges by isolating corporate from personal data on consumers’ personal mobile devices without needing to lock down the entire device. OMSS comes with a set of secure enterprise-ready productivity apps such as a browser, file browser and document viewer/editor, ensuring that corporate data is always protected. Core apps for email, calendar, contacts, tasks and notes are also offered as part of OMSS.

Mobile Apps – extending Oracle E-Business Suite (EBS)

With Oracle's Mobile Apps, enterprises have a huge choice of out-of-the-box functionality that can often be deployed with no additional licence cost. These apps take advantage of the latest technology, allowing access from both Apple iOS and Google Android devices,

so that a single app can run across multiple devices and channels. EBS customers can use the following mobile capabilities on any device, anywhere and anytime:

Oracle Mobile Approvals

Managers can respond quickly to pending approval requests such as expenses, requisitions, purchase orders, recruitment vacancies and offers.

Oracle Mobile iProcurement

Employees can monitor requisitions and take action on the mobile device.

Oracle Mobile Timecards

Staff can quickly capture time worked, with minimal data entry, accelerating productivity.

Oracle Mobile Sales Orders

Sales staff can view latest customer sales order status and take action on the mobile device.

Oracle Mobile Procurement

Individual buyers and purchasing department users can monitor purchase orders and take action on the mobile device.

Oracle Mobile Product Information

Product and supply chain managers can quickly search and view product information on the mobile device.

Oracle Mobile Inventory

Inventory managers can quickly look up on-hand and in-transit inventory across facilities.

Oracle Mobile Process Production Supervisor

Process manufacturing supervisors can monitor batches and take action on the mobile device.

Oracle Mobile Project Manufacturing

Project managers and shop floor personnel can quickly search and manage project inventory on the mobile device.

Oracle Mobile Maintenance

Maintenance technicians can view and execute maintenance work on the mobile device.

Oracle Mobile Discrete Production Supervisor

Discrete manufacturing supervisors can monitor work in process and act quickly if required.

Oracle Mobile Field Service

Field service technicians can remotely access information about customers, products, service requests and tasks. They can continue to update their tasks, capture materials, time and expense details, access inventory levels, and return, transfer and request parts regardless of internet connectivity, synchronising when they are online.

Oracle Fusion Expenses

Staff can quickly capture their expenses as they are incurred with minimal data entry.

About Capgemini

Now with 180,000 people in over 40 countries, Capgemini is one of the world's foremost providers of consulting, technology and outsourcing services. The Group reported 2014 global revenues of EUR 10.573 billion.

Together with its clients, Capgemini creates and delivers business, technology and digital solutions that fit their needs, enabling them to achieve innovation and competitiveness.

A deeply multicultural organisation, Capgemini has developed its own way of working, the Collaborative Business Experience™, and draws on Rightshore®, its worldwide delivery model.
