

Capgemini & QlikView®

A QlikTech partner since 2007, Capgemini has over 300 trained specialists in our Global QlikView Center of Excellence.

As company data grows exponentially, the world of business information management is changing rapidly to keep up. Most banks, capital markets firms and insurance companies have many management information tools within functions. Financial institutions struggle to reconcile differing or inaccurate answers from these independent tools.

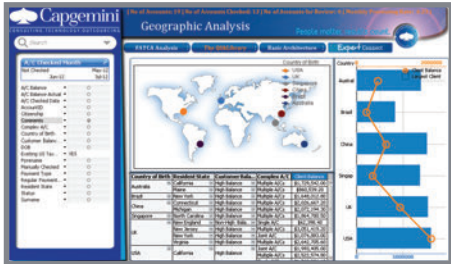

With QlikView and Capgemini, organizations can quickly unlock true insight into their data—enabling effective decision making based on clear and concise dashboards implemented in weeks, not months.

The introduction of the meta-data governance tool QlikView Expressor®, enables Capgemini to use this rapidly unlocked insight on a scale not seen before. Using QlikView tools, Capgemini can consolidate your business rules to drive out a single version of the truth across all of your reporting toolsets. With this integral foundation we can only then begin to grow a meaningful Business Intelligence environment to maximize your potential for the present and future.

As a leading QlikView partner, Capgemini uses experienced people and proprietary accelerators to perform a management information audit and create a plan to globally unify your data flows while supporting future management information needs. We have a Global Center of Excellence dedicated to developing QlikView tools, accelerators and methodologies specifically for our financial services clients to help execute on your plan.

WARP (Toolset) Review

Capgemini helps financial firms get a better handle on their data by creating a platform for a single version of truth that uses a unified Big Data solution across strategic toolsets and departments. Our proven Agile approach, called *Global Enterprise Service Provider* (GESP), is a uniquely flexible solution that can grow and adapt with your institution as you face new and emerging financial services challenges.

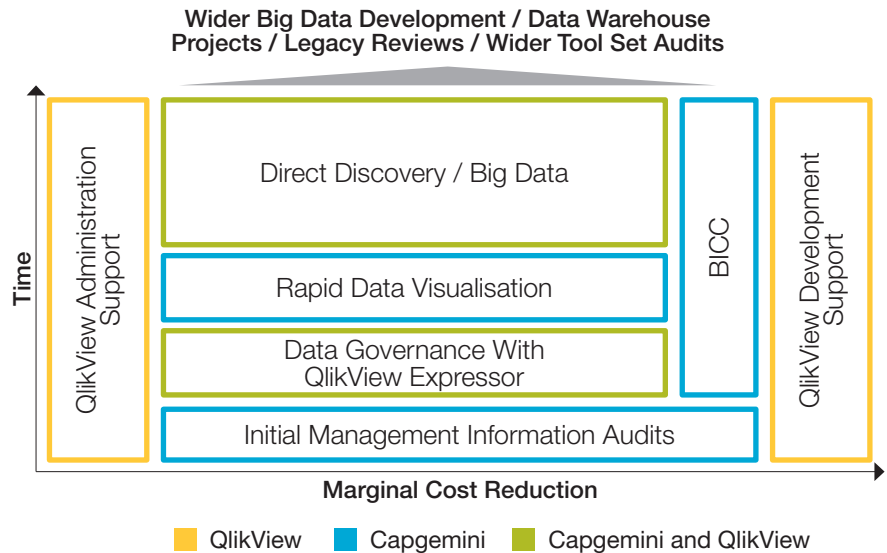

Our GESP solution gives you a world class engine to drive your management information reporting needs. Using the agility and dynamism of QlikView, our framework provides accelerators at each phase regardless of the complexity of the toolset range under review. We use the GESP model to consolidate, unite and then explore all potential possibilities that Big Data analytics provide—without adding long, static development lifecycles. The flexible and dynamic nature of QlikView and Capgemini’s framework support rapid turnaround and exploration. The GESP solution involves five phases.

Phase 1: Management Information Audit

Our solution begins with an initial management information audit to understand the existing landscape and run a risk analysis of the current reporting structure. This encompasses all reporting toolsets and serves as a foundation for further activities. Capgemini’s QlikView administration and developer support teams use our proprietary Health Check Accelerators to promote transparency for your audit. Goals for this phase:

- Risk analysis of the current reporting structure
- Review all current reporting toolsets
- Create consolidation plan

Capgemini’s Global Enterprise Service Provider Framework

Capgemini's GESP solution was designed to help financial firms achieve **globally unified data and reporting flows** through cost effective, flexible and efficient tools and processes

Phase 2: Data Governance

Using QlikView Expressor, Capgemini helps you define the data governance requirements and create a single version of the truth for your business. QlikView Expressor is QlikTech's solution for metadata management and includes a visual and reusable method for managing metadata-driven QlikView applications. Goals of this phase:

- Consolidate all QlikView deployments
- Plan business change management structure
- Drive data governance rules for all toolsets in use

At this stage we establish a *Business Intelligence Competency Center* to sustainably manage our business intelligence strategy—process and technology. With experience creating BICC organizations for a number of financial institutions, Capgemini can work with each partner to recommend the roles that are relevant and necessary to support the solution.

Phase 3: Rapid Data Visualization

We developed our proprietary *Rapid Data Visualization* (RDV) technique to accelerate the requirements gathering process for data projects. The methodology is highly interactive in nature to help IT and business users in understanding the processes required to develop the right solution. Goals for this phase include:

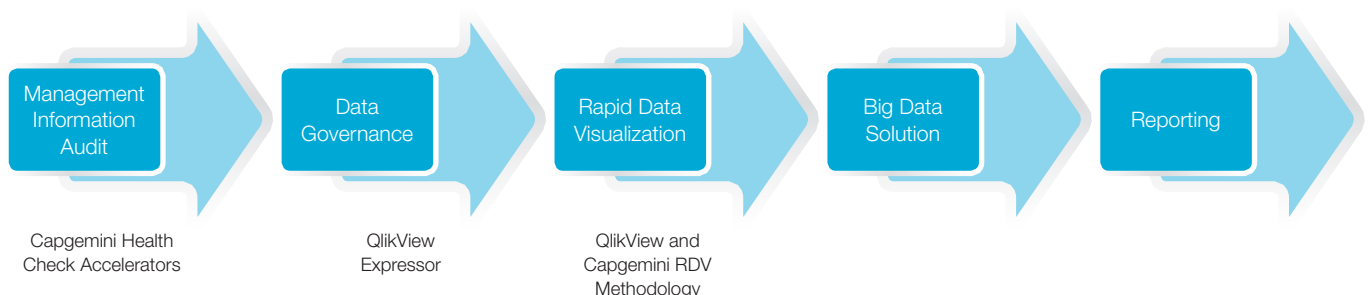

- Uncover business requirements for Big Data consolidated systems model
- Model new environment

Phase 4: Big Data Solution

In phase 4 we begin design and development of the QlikView Big Data solution. The solution supports common financial services reporting needs including:

- Associative in-memory experience in **real** and **near** time
- **Structured** and **unstructured** data to create business value
- The ability for subject experts to build **ad hoc** reports that can then be integrated for all to use
- **Mobile** analytics
- **Sentiment** analysis, the external market data that indirectly affects internal numbers
- Simple and descriptive **data governance** that can keep up with rapid build outs

Capgemini's Global Enterprise Service Provider Framework

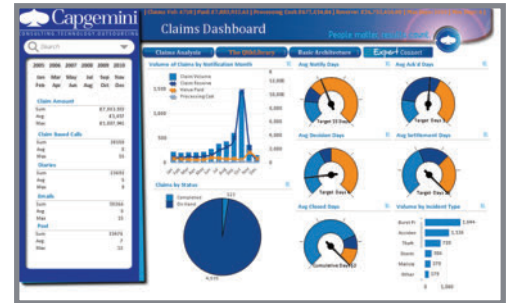

Phase 5: Reporting

In the final phase, Capgemini helps you implement a consolidated QlikView reporting environment which meets the goals of your institution. We can then integrate QlikView Direct Discovery to support real-time analysis without losing the associative experience in conjunction with traditional management information reporting. Our overall solution provides your firm with confidence in the accuracy of the data. It gives IT and BI administrators the ability to ensure discipline and data governance. Ultimately, our solution gives business users more confidence in your data and gives IT the ability to adapt and deploy quickly, easily, and with fewer resources. At this last phase, we help you review strategic and legacy toolsets to see if there are other opportunities to integrate with the Big Data solution.

The Right People with the Right Experience

Through our Global Center of Excellence for QlikView, Capgemini brings the right people with the right skills at the right cost to support project success—driven by our proven Rightshore® global delivery model.

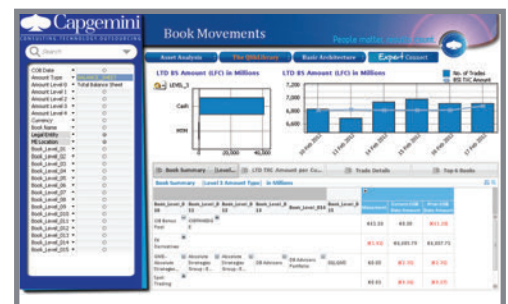

At Capgemini, we believe the future for financial services institutions is agile analytics. We know effective Big Data is driving transparency for banks, insurers and capital markets firms and are devoted to helping you find the right path to success.
