

Captivating Customers through Smart Home Management

You live in a home where virtually every connected device is controlled remotely and its management fully automated.

For many enterprises, the way to the customer is winning the race for their home – captivate their imagination there, and loyalty and conversion is all the easier. Imagine the possibilities.

One touch on your tablet and the movie starts, your shades close, and the surround sound kicks in at the perfect volume. When the sun goes down, your porch light turns on. The whole house locks down at 11 p.m., automatically.

You rush out the door with the kids to drop them off at school, but when you reach the office you wonder, “Did I close the garage door?” A simple glance at your smart phone assures you that it is closed, and you can relax.

You live in a home where virtually every connected device is controlled remotely and its management fully automated. From your tablet or smart phone, you control your home operations - dim the lights, lock the doors, turn up the heat, and set the alarm – from wherever and whenever you need.

What is Smart Home?

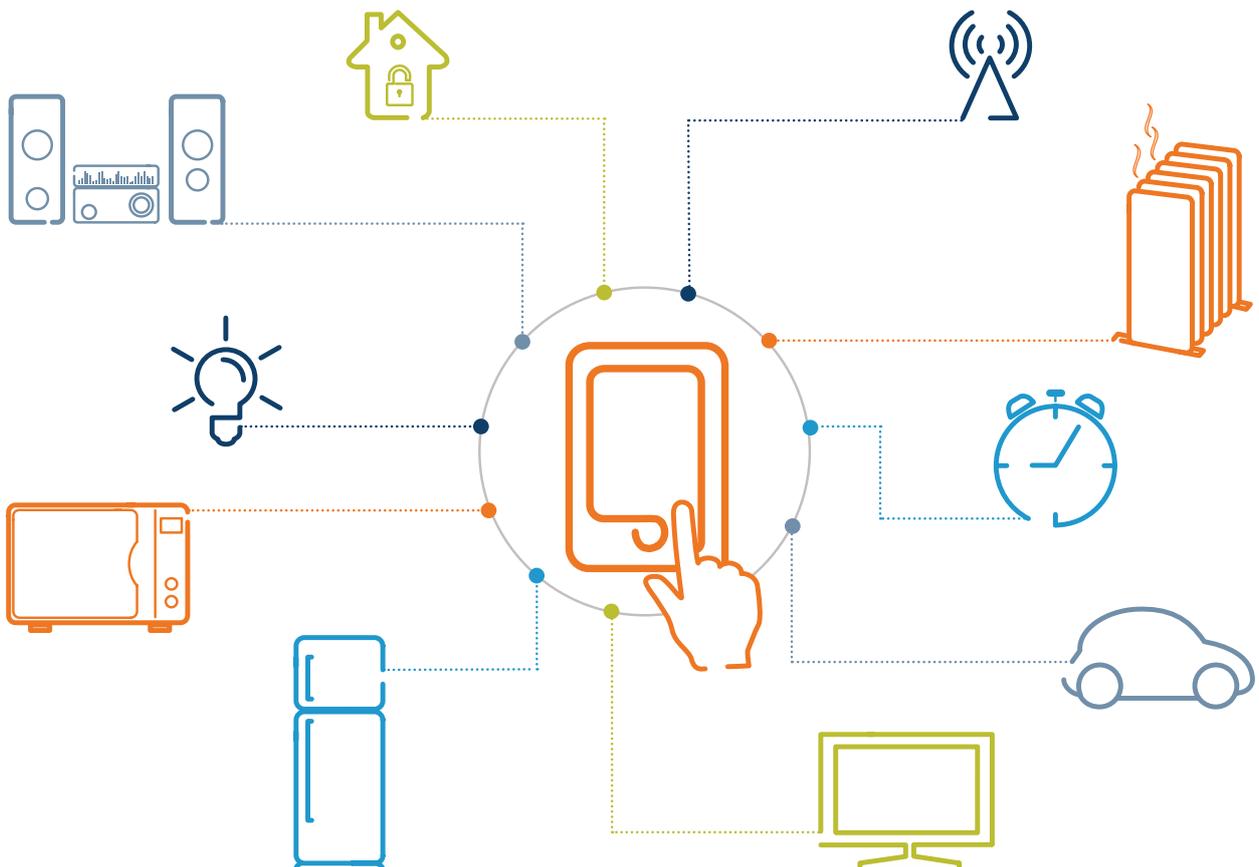

Smart Home is a solution that gives consumers control to a wide array of connected, intelligent devices in their home. It supports programmatic home management through learning the homeowner's schedule and personal preferences, and automating manual adjustments to provide convenience, money savings, and an overall enhanced home experience. It monitors immediate feedback coming from these devices and alerts the homeowner to unusual events.

Smart Home in Action

There are many players in the Smart Home ecosystem going after the same customer base - from manufacturers providing intelligent devices, to utilities encouraging efficient energy consumption, to telcos promoting the smart phone as an extension of you. With a growing number of stakeholders entering the market, any Smart Home solution needs to be built with flexibility and adoptability in mind. It must support the varying protocols in the market today with agility to incorporate the new standards of the future, all without inconvenience to the end user.

Consider this from the homeowner's perspective. He has a handful of smart devices in his home and a Smart Home solution installed on his smart phone. As he grows the number of appliances on his network, he adds them seamlessly to his app. This allows him to control his entire home using a common interface, and he can program dependencies between his devices, such as decreasing the stereo volume at the same time the lights are dimmed. This is the perfect user experience that grows with his needs without disruption.

Solution must handle constantly evolving protocols without disrupting the user experience.

Capgemini's Solution – From Idea to Build to Run

Capgemini partners with you in a collaborative manner to implement a Smart Home solution that supports your overarching digital strategy. This includes designing a solution that aligns with your business goals, customizing our pre-built framework to support your needs, and running the solution for you and your customers. Our framework and pre-configured drivers for hundreds of smart devices means you are not starting from scratch. Our cloud-based platform means your solution can be deployed rapidly in an affordable, scalable manner.

Solution benefits:

Personalization

Configuring the homeowner's preferences for hassle-free home management

Service Excellence

Automating a set of pre-defined commands at the touch of a button

Convenience

Remotely control devices, from anywhere, to manage your home now

Simple Set-up

Automatically detect new devices within the home and facilitate their registration

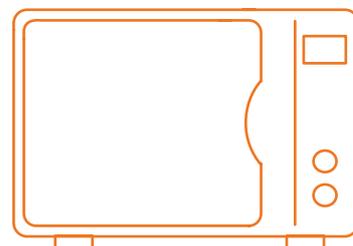

Future Proofing

Built on open standards to interface with any device that supports open protocols

Our solution gives you the flexibility and adaptability your customers need as the Smart Home market evolves. We work with you to implement a solution that fits your business needs, and then run it on your behalf, letting you focus on what you do best.

Why Capgemini

Our strong blend of mobile expertise coupled with deep sector experience gives us the know-how and credentials to build a Smart Home solution tailored to your unique business needs. Our accelerators and industrialized frameworks help you realize results and deploy your innovative solution faster.
