Dramatically Improve Performance with Capgemini's Database Consolidation for Oracle Engineered Systems

Given the unprecedented efficiencies brought on by advances in technology, IT is increasingly expected to do more with less. However, because many IT landscapes have undergone organic growth over the years, servers are often underutilized and databases are often scattered, which creates an environment that is difficult to maintain, let alone optimize. At a time when IT departments need to create value, improve performance, and increase agility, unwieldy ecosystems can get in the way.

Enable adoption of new technologies with Capgemini's Database Consolidation for Oracle Engineered Systems

Capgemini's database consolidation solution offering for Oracle engineered systems helps enterprises optimize their IT landscapes using Capgemini's industry-specific templates and the Oracle Exadata Database Machine, a highly scalable platform capable of handling mixed workloads. Our offering is supported by a central center of excellence that offers standard pricing and includes advisory assistance from planning and execution to support and maintenance services that leverage Oracle Enterprise Manager to monitor all software and hardware components.

Increase efficiency

By consolidating their databases, enterprises can begin their journey to a private, cloud-based ecosystem and other disruptive technologies and practices that can scale and improve efficiency, including database maintenance outsourcing. Other benefits of database consolidation include:

- Significantly improved database stability and performance
- Lower operational costs and license fees for maintaining infrastructure
- Increased agility, thanks to the enablement of self-service and cloud-based technology
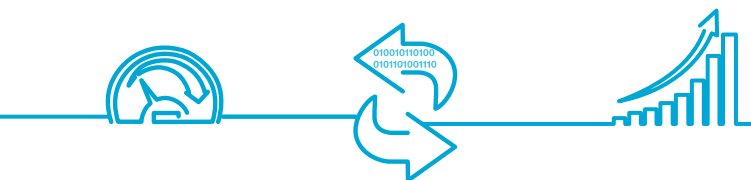

Capgemini's Solutions for Oracle Engineered Systems at work

Capgemini brings experience in helping enterprises around the world and across several industries in realizing the benefits of database consolidation with Oracle engineered systems. In fact, we implemented Oracle Exadata at a Spanish bank to dramatically improve cost efficiency and productivity in an environment with over 2,500 Oracle databases and more than 500 servers in different versions and architectures.

Partners in Business Transformation

In addition to this experience, Capgemini has the expertise and capabilities to make every Oracle engineered systems project a success. We operate an Oracle Engineered Systems Center of Excellence that supports our global team of Oracle engineered systems solution architects and over 200 trained delivery resources, helping capture and apply industry best practices and share learning from our numerous engagements.

These capabilities, supported by our global team of over 13,500 consultants and our status as an Oracle Diamond-level partner, ensure that we can help any enterprise, no matter the industry, adopt Oracle engineered systems to realize the value of a simplified IT landscape.

About Capgemini

Now with 180,000 people in over 40 countries, Capgemini is one of the world's foremost providers of consulting, technology and outsourcing services. The Group reported 2014 global revenues of EUR 10.573 billion.

Together with its clients, Capgemini creates and delivers business, technology and digital solutions that fit their needs, enabling them to achieve innovation and competitiveness. A deeply multicultural organization, Capgemini has developed its own way of working, the Collaborative Business Experience™, and draws on Rightshore®, its worldwide delivery model.
