CAST and Capgemini Expand Their Relationship to Industrialize Software Quality

Capgemini Application Intelligence[1] Center in India uses CAST technology
to support its Rightshore®[2] Global Delivery Model and better serve the Group's clients

NEW YORK and PARIS, July 15, 2009 - Capgemini, one of the world's foremost providers of consulting, technology and outsourcing services, and CAST, the worldwide leader in Automated Application Intelligence, today announced that the two companies have expanded their long lasting relationship to provide software quality assessment and performance measurement throughout the entire network of Capgemini Rightshore® Delivery Centers. Operating in Capgemini's Application Intelligence Center in India, CAST's Application Intelligence Platform supports Capgemini's business units, which draw on the Rightshore® global delivery model, to ensure the highest quality standards in software development and maintenance for its clients.

Thanks to the CAST platform, the Capgemini's Application Intelligence Center is capable of industrializing virtually any kind of application. CAST's Application Intelligence Platform provides Capgemini Rightshore® Delivery Centers with the visibility required to measure and improve the software quality of applications they create and maintain, to identify potential business risks and to drive client satisfaction. CAST also provides critical performance metrics to Capgemini's team leaders. By continually monitoring software quality throughout the lifecycle of a project, CAST helps teams avoid application rework, which saves them time in the application development phase.

"Capgemini and CAST have been partners over five years, so we know them well and are confident that CAST can deliver software quality assessment technology and measure software performance in a manner that meets Capgemini's strict standards," said François Hucher, Group Delivery Manager, Capgemini. *"We have now made the CAST Application Intelligence Platform a key part of the standard tool set that supports our Distributed Delivery Model to better serve Capgemini Group's clients"*

---

[1] *Application Intelligence* consists of assessing and measuring the quality of software applications, while tracking the performance of application development.

[2] *Rightshore®:* Capgemini's global delivery model, which offers clients – depending on their needs- the best balance between services delivered from centers in close geographical proximity and/or with close cultural ties with their sites (onshore or nearshore) and services delivered from more remote centers (offshore).

Capgemini teams have used CAST software for a variety of applications in different technologies and industries. Capgemini has even piloted successfully the use of CAST in the Amazon Elastic Compute Cloud (Amazon EC2) environment, fostering synergies with its increasingly successful Cloud Computing offer.

"Global systems integrators such as Capgemini are necessarily driven by business productivity and invest in technology to closely monitor and improve their ROI," said Marc Zablit, vice president of business development at CAST. *"We've expanded our partnership with Capgemini to move beyond case-by-case support to implement the CAST Application Intelligence Platform at Capgemini's center in India to further enhance the productivity and consistency of Capgemini's delivery teams worldwide. In this manner, CAST is directly supporting a core Capgemini objective of further industrializing its Rightshore® Distributed Delivery Model."*

About CAST Software
CAST Software is the world leader and pioneer in Application Intelligence software, providing the metrics and information IT executives must have to measure, monitor and improve the internal quality of business applications and the performance of development teams around the globe. Founded in 1990, CAST has helped more than 650 organizations worldwide speed delivery to the business, mitigate risks in production, improve customer experience, and reduce the total cost of application ownership. CAST is listed on NYSE-Euronext (Euronext: CAS) and serves Global 2000 organizations worldwide with a global network of offices in the US and Europe. For more information visit www.castsoftware.com.

About Capgemini
