

# Smart Workspace Collaboration

**A Smart Workspace needs a Smart Conference Room.**

The combined power of Sogeti and Intel have developed the Smart WorkSpace, an innovative suite of services that create a tailored solution to unlock the true value of a connected workforce. Smart WorkSpace creates a digital-ready workforce that boosts end-user productivity, improves business agility, addresses environmental objectives, and reduces overall IT costs.

Smart Workspace makes the most of every meeting using Intel Unite® to connect and collaborate.

## Meeting Challenges:

- Meetings are slow to start as presenters must locate and physically connect their devices to the conference room display.
- Each time a new presenter takes control, meetings are further delayed as participants disconnect/reconnect. Productivity may grind to a halt if a compatible connection cannot be found.
- Remote participants log into meetings on unmanaged connections, possibly compromising security.

## Wireless Collaboration Starts with Intel Unite®

Whether your team members are seated around the table or calling in from half a world away, the Intel Unite solution provides a smart, secure, connected meeting space. Start meetings faster, hand off control more easily, and collaborate with confidence, knowing your presentation data is secure, and participant access is tightly managed through the powerful Intel® technologies.

## Smart Meetings Start Fast and Stay on Track

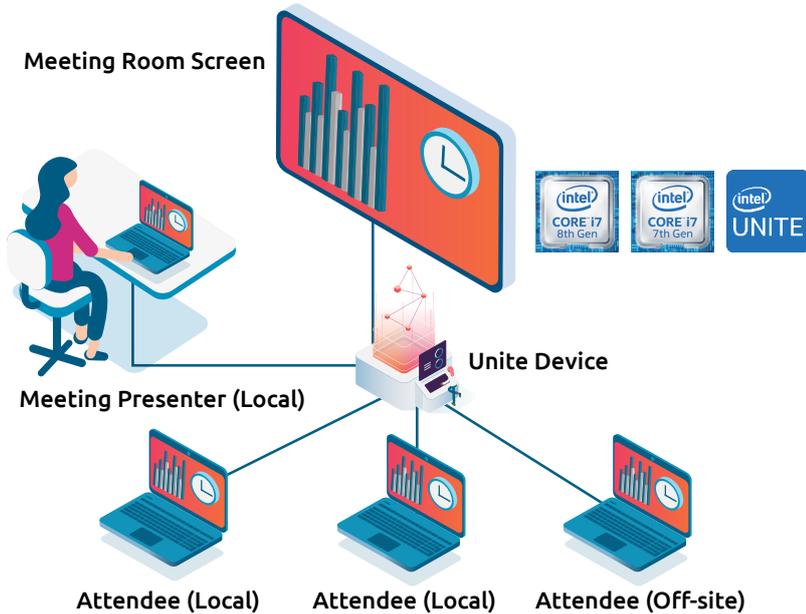

With this innovative combination - an Intel Core vPro processor based mini-PC in the meeting space and the Intel Unite® app on each client device - team members can get busy quickly and stay focused.

- **Cut the cords** - In-room participants can instantly connect to projectors, interactive whiteboards or other displays, or all parties can view presentations on their individual devices. The daily dongle scramble is a thing of the past.
- **Moderated Sessions** - The Moderated feature allows participants to take control of meetings or sessions by grouping functionality into three different roles: Moderator, Presenter, or Viewer.
- **Application Sharing** - Select from a list of running applications and share that content only. All other content will be hidden from the audience.
- **Peer-to-peer sharing** - The meeting leader can hand off control as needed - to up to four presenters - enabling others to share their own screens wirelessly.
- **Everyone's on the same page** - Distribute, review, and amend files together in real time. Later, transfer those files to all participants so that everyone has the most recent copy.

## The Elements of a Smart Conference Room are Simple with Intel Unite®

**For Smart Meeting Spaces** - A mini-PC with the latest Intel Core vPro™ processor provides leading-edge security and performance as well as innovative wireless capabilities. This mini-PC serves as the hub device.

**For all participants** - The Intel Unite® app runs on each client device, enabling attendees to connect and receive content in real time, regardless of location.

## About Sogeti

Sogeti is a leading provider of technology and engineering services. Sogeti delivers solutions that enable digital transformation and offers cutting-edge expertise in Cloud, Cybersecurity, Digital Manufacturing, Digital Assurance & Testing, and emerging technologies. Sogeti combines agility and speed of implementation with strong technology supplier partnerships, world class methodologies and its global delivery model, Rightshore®. Sogeti brings together more than 25,000 professionals in 15 countries, based in over 100 locations in Europe, USA and India. Sogeti is a wholly-owned subsidiary of Capgemini SE, listed on the Paris Stock Exchange.

## About Intel

Intel, Unite, Core, vPro, and the Intel logo are trademarks of Intel Corporation in the U.S. and/or other countries.

Intel® vPro™ technology is sophisticated and requires setup and activation. Availability of features and results will depend upon the setup and configuration of your hardware, software and IT environment.

<http://www.intel.com>

## Make Meeting Rooms Easier to Manage

If your Smart Workspace already includes Intel Core vPro™ technology, then adding the Intel Unite solution to your conference rooms is easy to integrate. Make greater use of your device management and control capabilities to help reduce IT costs and improve manageability.

- **Manage Remotely** - Use the Intel Unite admin portal, along with the full capabilities of Intel vPro technology to manage conference room Unite devices from any location.
- **Keep Meetings Secure** - To join the meeting, participants are required to enter a rotating PIN code generated by Unite. Outside guests can be granted access with many (or few) network permissions.
- **Safeguard Sensitive Data** - Using Intel Unite, meetings are protected with enterprise-grade security 256-bit Secure Sockets Layer (SSL) data encryption.

## Start Small and Scale Smart

You can start with a single standalone Intel Unite device as a pilot, then scale up as needed to multiple, server-controlled Smart Conference Rooms. The Intel Unite solution is designed to be compatible with new capabilities such as:

- **In-Room Controls** - Manage lighting, speakerphones, cameras, A/C, and other environmental settings.
- **Multiple OS Support** - Intel Unite® presently supports Windows, Android, Google Chrome and Apple Mac OS X and iOS operating systems.
- **Skype for Business** - Install a simple plugin that provides integration between the Intel Unite solution and Skype for Business.
- **Other Conference Solutions** - Enjoy a unified meeting experience as the Intel Unite solution accommodates Cisco TelePresence and more.
