Applications
## Unleashed

Kondo my
Portfolio

Getting rid of the burden of an existing legacy applications landscape will bring a breath of fresh air to any IT household. But to actually get it done, requires the mindset of a specialized tidying up guru. First of all, it's a matter of commitment, aligning the need for decluttering throughout the organization, and envisioning the benefits of a new applications portfolio. Tidying up really is about respectfully discarding applications that no longer provide value. Architecture and new platform technologies then hold the key to systematically clean up - in the right order - and move forward to the desired state; a simpler portfolio of application services, that all spark pure joy.

Bot is the
New App

Say what? Every day, new and exciting applications pop up that don't look like traditional applications. Often you can't even see them at all. Building on powerful artificial intelligence (AI), it's just a matter of stating an intent in natural language and an application service will be activated. Application bots may involve spoken dialogue or messages and emoticons. Bots will seriously diminish the number of applications on desktops and mobile devices. Or at least, they will shield the user from their complex interfaces. Close your Windows – the bots are here.

When Code
Goes Low...

When code goes low, business gets on a high! You may be blessed with brilliant ideas for killer application services, but you'll need to deliver them blazingly fast and with the right quality. Classic software delivery based on manual work, complex programming languages and more mythical man months will only get you so far. It is now easier than ever to construct applications without huge coding efforts. The secret is in powerful, AI-enabled tools that leverage API catalogs, prebuilt templates and automation to the fullest extent. And these tools are so powerful - yet easy to use, that they get the popular vote of both business and IT people.

Goes Low...

API
Economy

May the best API win. Unleash the power of your applications portfolio through easy-to-use, standardized interfaces to application services. This will allow both the business and IT sides to quickly build flexible solutions that feel like their own, even if they are not. And by exposing your carefully managed API catalog to the outside world, it doesn't just open up your business in new ways to customers and partners, it might also give way to a platform for innovative ideas and solutions that you never envisioned yourself. Come to think of it, you may want to intimately know and use the APIs of others as well. Your digital breakthrough may be just one API away.

APS ♥ AI

AI sometimes seems to be the domain of mad data scientists and highly specialized, secretly initiated experts. But actually - through simple APIs and webservices - every application can benefit from touches of smart, without any of the black magic involved. Go through the applications portfolio, step-by-step, to find the application moments that would profit the most from added AI capabilities such as image recognition, natural language understanding, automated decisions, predictive analytics and recommendations. Use benefits logic to prioritize the cases and leverage a catalog of ready-to-implement AI services. Application users will love all that extra intelligence.
