Telemedicine’s time has come. Are you ready?

COVID-19. Social distancing. Fear of visiting clinics. This is the new normal. Telemedicine is the answer.

Telemedicine platforms aren’t new, but the pandemic has highlighted their value. With its healthcare market share growing over the years, from $20.4 billion in 2013 to a projected $30 billion in 2020, telemedicine is a strong healthcare delivery option. The environment for telemedicine has significantly opened up as federal and state governments are relaxing regulations, payers are waiving co-pays for COVID-19 testing and treatment, the Centers for Medicare & Medicaid Services is creating new CPT codes for telemedicine reimbursements, and more.

Telemedicine requires healthcare systems’ platforms to be fully integrated with the AI/ML technology to derive meaningful, real-time insights that can improve patient experience (e.g. helping clinicians manage disease progression or optimize drug costs). Telemedicine requires healthcare systems’ platforms to be fully integrated with the AI/ML technology to derive meaningful, real-time insights that can improve patient experience (e.g. helping clinicians manage disease progression or optimize drug costs).

Capgemini can help you with its Integrated Telemedicine offering. It is an end-to-end, multi-later solution designed to assess current telemedicine capabilities, implement a platform and/or integrate with data and AI assets to reflect insights. Our solution not only addresses the immediate healthcare need due to the pandemic, but also provides a long-term strategy as telemedicine becomes the new normal.

Capgemini Integrated Telemedicine solution
Our plug-and-play solution is designed to help you implement only what you need to effectively deliver value to patients.

Think about this:

1. Are you harnessing the power of telemedicine to bring down the cost of care, improve access to care and enhance member experience?
2. Have you thought about the impact of the regulatory framework surrounding telemedicine?
3. Have you considered the platform requirements vis-a-vis your telemedicine future?
4. Is your telemedicine platform integrated into your overall ecosystem?
5. Are you able to derive insights from your telemedicine platform?

Assess current telemedicine capabilities and adoption while understanding the changing regulatory environment on a 1-to-1 Telemedicine.

Identify gaps and develop roadmaps for rapid capability build up to address pandemic needs.

Evaluate and qualify credential telemedicine platforms.

Develop Metrics and KPIs to measure Telemedicine effectiveness.

Assess current telemedicine capabilities and adoption while understanding the changing regulatory environment on a 1-to-1 Telemedicine.

Identify gaps and develop roadmaps for rapid capability build up to address pandemic needs.

Platform Implementation and Integration with Ecosystem
Select and implement platform.
Integrate platform with your existing system or ecosystem (e.g. claims, billing, enrolment).

Manage increased volume of claims and improve claims processing via Touchless Claims, Cognitive Document Processing and Digital Contact Center.

Leverage real-time data generated from the telemedicine consults to derive meaningful insights. Solutions include Capgemini’s Real-time Medical Management, Managing Disease Progression, Drug Cost Optimization and Care Gap Closure and Risks.

Supplement your current staff with Capgemini’s 1500+ nurse network as an extended army of care givers to address increased load on hospitals.

Telemedicine platforms
- Reduce the spread of infection by limiting physical contact
- Reduce cost of care
- Improve access to care via larger provider network for patients
