

Capgemini and Pasqal

Unleashing possibilities with
quantum technology

CAPGEMINI VENTURES

Introducing a collaboration like no other. We're leveraging our domain knowledge and applied quantum expertise, and teaming up with Pasqal and their Nobel Prize-winning technology to unlock the true potential of quantum computing.

Pasqal builds quantum processors from neutral atoms in 2D and 3D arrays to bring a strategic advantage to its customers. Their technology is leading the way towards a future where quantum solutions transform everyday life and are set to revolutionize various industries.

Our joint purpose

We're pioneering quantum solutions across sectors such as life sciences, financial services, energy transition and utilities. Specific examples of this include:

**Speeding up
drug discovery**

**Optimizing
asset portfolios**

**Grid management
and power load
prediction**

These innovations are driving industry advancement, aimed at helping customers achieve their higher goals faster and more efficiently, ultimately securing a robust industry leadership position.

The power of our partnership

Together, we harness industry-leading quantum hardware to tackle global challenges. As two Global leaders, we provide end-to-end quantum solutions, determined to tackle planetary and human challenges to make a tangible impact on people's lives.

Step into the fascinating world of quantum computing, where the boundaries of innovation are pushed beyond limits. For further information, visit the Capgemini and Pasqal webpage or contact us now >
