Procurement's next leap: AI-enabled, data-driven and business-aligned transformation

The procurement service market is shifting from **digitalized workflows to governed autonomy**, our 2025 assessment revealed. It is moving beyond task automation toward AI-assisted execution that is visible, auditable and tied to business outcomes, such as improved resilience, superior risk management, cash optimization and ESG. Based on the discussions with providers and their RFIs, three trends stand out: (1) *agentic AI* embedded in intake, sourcing, contracting, accounts payable and supplier management with human-in-the-loop controls; (2) *data readiness* advanced from one-off cleanups to continuous master data governance and (3) *orchestration layers* that unify buying channels across mixed source-to-pay (S2P) models while instrumenting adoption, compliance and cycle time. While the providers might vary in scale and starting points, their

trajectory is consistent: modular, cloud-native services that strategically combine consulting-led capabilities, platform enablement and managed execution, with AI as an amplifier, not the offer itself.

Provider's strategy statements highlight a single idea: procurement must operate as an outcome engine, not a transaction factory. The path begins with unified data and governance, extends through platformed workflows and evolves into agentic operations where autonomy is explainable and bounded. Investment theses focus on scaling intelligence, strengthening upstream advisory and designing experiences that drive adoption rather than enforce compliance. GTM approaches prioritize industry relevance, outcome-linked commercials and ecosystem co-innovation. The differentiator is operating consistency at scale, global models that hold under stress, not just innovation centers. North Star metrics such as cost optimization, superior compliance and regulatory management, risk management, ESG and UX are delivered through repeatable playbooks, measurable baselines and transparent governance. End-to-end resilience

AI-enabled, governed procurement is becoming the new engine for **outcomes, not transactions.**

and speed are no longer trade-offs but joint requirements for procurement to sustain enterprise trust.

As procurement modernizes, there is a shifting emphasis from isolated digital upgrades to **holistic operational redesign**, where technology, data and governance operate as a single system. What distinguishes leading models is not the tools themselves, but how they **reshape the flow of demand, decisions and controls** across the S2P lifecycle. Emerging architectures combine intelligent agents, governed intake, cloud orchestration and continuous data stewardship, creating an environment where efficiency and compliance do not compete but reinforce each other. These foundations are enabling a new generation of scalable, resilient procurement operations, captured in five transformational shifts below.

How technology is transforming operations — Five concrete shifts

Shift from bots to policy-governed agents: Historically, automation removed manual clicks. Today, the shift is deeper: technology now helps enforce policy at the point of action.

Instead of teams validating every request or invoice, guided workflows and AI assistants ensure users follow the right buying path, use the right supplier and meet controls without relying on manual policing. The outcome is faster processing with fewer errors and a smoother UX.

Intake-led orchestration as the new front door: Rather than allowing requests to enter the system randomly, providers are assisting in creating a single, intelligent front door where every request is assessed, categorized and routed correctly. This approach simplifies the buying experience, eliminates back-and-forth and ensures the right process is followed from the start. It also standardizes how demand enters procurement, giving leaders more visibility and control without needing to enforce new tools on the business.

Data management moves from cleanup projects to continuous stewardship: Traditionally, procurement relied highly on fragmented supplier data and inconsistent coding. The new model treats data accuracy as a continuous operational responsibility, supported by automated enrichment and

monitoring. Clean, reliable data improves downstream processes, across risk checks and supplier performance to invoice matching and forms the base for more advanced automation and analytics.

Insights become real-time and forward-looking, not retrospective: Instead of static reports and scattered dashboards, enterprises now use unified, real-time views of spend, supplier risks, process performance and compliance. These insights help teams act proactively, such as detecting delays early, preventing late payments or managing supply disruption risks. This shift has strengthened decision-making and improved procurement's ability to influence business outcomes.

Procurement modernization is delivered through ready-made, plug-and-play service modules: In lieu of building every workflow from scratch, organizations can now adopt pre-configured service modules for areas such as AP automation, tail-spend buying, supplier onboarding and compliance governance. These packages come with proven processes, templates and performance benchmarks. They reduce transformation effort, lower risk and

deliver faster benefits compared to traditional, fully customized projects.

Procurement operations are entering a phase where business expectations are rising faster than traditional processes can support. As enterprises demand speed, resilience and transparency, new behaviors are reshaping how procurement partners with stakeholders and suppliers. These trends are not abstract or futuristic but reflect current enterprise priorities: smarter sourcing, simpler engagement, embedded risk controls, value-linked pricing and industry-specific approaches. Together, they reveal how procurement is becoming more integrated, proactive and business-aligned. The following trends will provide further insights.

Smarter sourcing support: Enterprises are using intelligent assistance to streamline the heavy administrative sourcing tasks, such as preparing RFx documents, summarizing supplier responses and supporting award analysis. This enables category teams to focus on negotiation, strategy and stakeholder alignment instead of repetitive coordination tasks.

Unified intake experience: Enterprises are consolidating all procurement requests into a single, guided entry point. This simplifies how employees engage procurement, reduces confusion, improves compliance and enables consistent routing and prioritization without requiring users to navigate multiple systems.

Embedded risk controls: Risk, compliance and ESG checks are now embedded into day-to-day procurement workflows, such as onboarding, sourcing, contracting and invoice approvals. This prevents issues from surfacing late in the process and ensures governance is enforced automatically rather than through manual reviews.

Outcome-linked pricing: Commercial models are gradually shifting from effort-based billing to outcome-based pricing linked to savings, adoption or efficiency improvements. This approach aligns delivery with tangible business results, provided clear baselines and tracking are in place.

Evolving AI-driven SLAs: With AI taking on more operational steps, performance expectations are shifting. SLAs are expanding

beyond speed and volume to include accuracy of AI recommendations, reduction in exceptions, quality of automated decisions and adherence to responsible AI practices. This reflects how AI is changing not only how work is done but also how success is measured.

Despite clear momentum, enterprises still face obstacles that slow transformation and limit the impact of new tools. Many of these challenges are structural: fragmented data, unclear ownership, difficulties measuring value, uneven AI readiness and rising security expectations across expanding ecosystems. These are not technology issues alone; they reflect organizational maturity, governance gaps and change management demands. Understanding these challenges upfront helps set realistic expectations and ensures that transformation programs are designed for durability, not just quick wins.

Below are some of the major challenges that have been identified in this year's assessment.

Weak data foundations

Many enterprises still struggle with inconsistent supplier records, outdated classifications and fragmented contract data. These gaps slow processes, create errors and limit the effectiveness of analytics, automation and compliance checks, making data the primary dependency in any modernization effort.

Undefined process ownership

Technology is often implemented without clear decision rights, escalation paths or policy rules. Without aligned governance, new intake tools and workflow systems risk becoming bottlenecks rather than simplifiers, as the underlying operating model remains unclear. This increases the importance of strong strategic and technology consulting capabilities to address this challenge.

Hard-to-measure outcomes

Although enterprises seek savings-linked or performance-based pricing, they often lack clean baselines, consistent tracking or transparent measurement frameworks.

This makes it difficult to confidently adopt outcome-based models and can lead to misalignment with partners. Addressing this requires focusing not only on outcomes, but also on the approach and the time required to achieve them.

Limited AI readiness

AI adoption is often constrained not by tools but by people-side challenges, including lack of training, low familiarity and uncertainty about when to trust AI recommendations. Without strong change support and clear exception rules, organizations underutilize the intelligence embedded in modern platforms. Concerns around AI tools' maturity, use cases and data safety are also major strategic bottlenecks.

Rising security expectations

As procurement data spreads across cloud platforms, partners and supplier networks, the risk surface expands. Protecting sensitive spend, contract and supplier information now requires stronger controls, continuous monitoring and clear guardrails for responsible AI use, a level of rigor many enterprises are still building toward.

Quadrant Specific Insights

Procurement Operations Modernization Services

The most evident innovation reported in this quadrant is the agentic layer across P2P, AP and intake, governed by thresholds and exceptions. Programs couple orchestration with cloud control towers and continuous master data management (MDM). Pricing is increasingly hybrid (T&M, transactions and outcome elements), underpinned by metrics such as touchless percentage, first-time-right rates and exception aging. Risk and ESG checks are inserted in-flow, and security stacks protect multiparty data. The near-term focus is not fully autonomous procurement, but repeatable supervised autonomy that reduces manual steps while strengthening auditability.

Strategic Sourcing and Category Management Services

Technology plays a pragmatic role: agents automate setup, summarization and award analysis at scale; analytics combine external indices with historical outcomes to prioritize waves; and category playbooks are verticalized

(CapEx/MRO, clinical, asset-intensive). The focus remains on strategy, negotiation and stakeholder alignment, but throughput and consistency improve noticeably at the tactical level.

Sourcing is shifting from savings to sustained advantage. Providers now emphasize faster, higher-quality deals, dynamic category signals and tighter value tracking. Models using structured pipelines, scenario logic and cosourcing help protect savings, expand addressable spend and strengthen resilience and confidence.

Supplier Management and Contract Lifecycle Services

Contract intelligence is shifting from optical character recognition (OCR) to clause and risk orchestration with multilingual support; supplier relationship management (SRM) expands beyond scorecards to continuous surveillance (financial, operational, cyber and ESG) embedded into onboarding and renewals. Vendor assurance and reverification operate as governed routines rather than annual events, with exceptions escalated and obligations tracked to prevent leakage.

What Enterprises Should Prioritize in Their 2026 Procurement Roadmaps?

Get the operating model right before adding new tools

Before investing in new platforms or AI, enterprises should define how procurement will operate, including decision rights, approval flows, exception handling and success metrics for each process. Clear roles and decision rights make technology more effective and prevent new systems from becoming bottlenecks.

Treat clean data as a daily discipline, not a one-time project

Reliable supplier, item, contract and transaction data are the foundation for automation, analytics and AI. Enterprises should build ongoing data-quality routines (not just cleanup cycles) so procurement always operates on accurate and the latest information.

Start AI adoption at low risk, high-benefit areas

Enterprises should prioritize use cases where AI can safely add value today: intake triage, invoice matching, basic sourcing support and helpdesk queries, rather than aiming for

complete autonomy. These areas deliver quick wins, reduce workload and build organizational confidence before expanding into more complex use cases.

Build measurement and instrumentation upfront

To achieve better savings, faster cycles or higher compliance, enterprises must establish baselines and track metrics early. Clear metrics (touchless rate, exception aging, contract usage, cycle time) make transformation measurable, support outcome-based partnerships, and help teams prove value internally.

Strengthen security and responsible AI guardrails

As procurement data moves across cloud platforms, supplier networks and AI models, enterprises need stronger controls, including access governance, data-handling rules, monitoring and human-in-the-loop oversight. This ensures AI enhances procurement without exposing the organization to new risks.

Executive Summary

Modern procurement is shifting toward governed autonomy, where AI-assisted execution, continuous data stewardship and orchestrated intake work together to deliver resilience, risk control and business outcomes at scale. Providers are aligning around modular services, explainable autonomy and industry-relevant operating models that elevate procurement from a process function to a true outcome engine.

Key focus area for Procurement Services 2026 study

Simplified Illustration Source: ISG 2026

Definition

The accelerated pace of business transformation continues to reshape the scope and value of procurement services. The 2026 ISG study reflects these shifts through an evolved provider and service assessment approach, introducing three comparative quadrants aligned with emerging enterprise needs. Over the next two years, ISG anticipates heightened focus on sustainability, AI-driven decision-making, agile operating models and outcome-based procurement strategies.

Global disruptions, ranging from geopolitical instability to evolving compliance mandates, have intensified the need for resilient, diversified and localized supply chains. Sustainability remains a core priority, now coupled with responsible sourcing and ESG-linked supplier performance. The rise of generative AI (GenAI) and autonomous procurement capabilities is transforming sourcing, contract management and supplier collaboration —enabling predictive insights, real-time risk mitigation and hyper-personalized procurement experiences. The rise of advanced tech integration in procurement operations has

resulted in a huge shift in major KPIs, where the supply chain resilience index, supplier risk index, real-time spend insights index and sustainability matrix will be key for enterprises globally.

The 2026 ISG Procurement Services Provider Lens® study introduces three quadrants: Procurement Operations Modernization Services, Strategic Sourcing and Category Management Services and Supplier Management and Contract Lifecycle Services. These reflect the convergence of BPO and transformation consulting, with continued emphasis on change management, risk mitigation and adaptive operating model transformation to meet evolving enterprise procurement goals.

Scope of the Report

This ISG Provider Lens® quadrant report covers the following three quadrants for services/solutions: Procurement Operations Modernization Services, Strategic Sourcing and Category Management Services and Supplier Management and Contract Lifecycle Services.

This ISG Provider Lens® study offers IT-decision makers:

- Transparency on the strengths and weaknesses of relevant providers
- A differentiated positioning of providers by segments (quadrants)
- Focus on the Global market

Our study serves as the basis for important decision-making by covering providers' positioning, key relationships and go-to-market considerations. ISG advisors and enterprise clients also use information from these reports to evaluate their existing vendor relationships and potential engagements.

Provider Classifications

The provider position reflects the suitability of providers for a defined market segment (quadrant). Without further additions, the position always applies to all company sizes classes and industries. In case the service requirements from enterprise customers differ and the spectrum of providers operating in the local market is sufficiently wide, a further differentiation of the providers by performance is made according to the target group for products and services. In doing so, ISG either considers the industry requirements or the number of employees, as well as the corporate structures of customers and positions providers according to their focus area. As a result, ISG differentiates them, if necessary, into two client target groups that are defined as follows:

- **Midmarket:** Companies with 100 to 4,999 employees or revenues between \$20 million and \$999 million with central headquarters in the respective country, usually privately owned.

- **Large Accounts:** Multinational companies with more than 5,000 employees or revenue above \$1 billion, with activities worldwide and globally distributed decision-making structures.

The ISG Provider Lens® quadrants are created using an evaluation matrix containing four segments (Leader, Product & Market Challenger and Contender), and the providers are positioned accordingly. Each ISG Provider Lens® quadrant may include a service provider(s) which ISG believes has strong potential to move into the Leader quadrant. This type of provider can be classified as a Rising Star.

- **Number of providers in each quadrant:** ISG rates and positions the most relevant providers according to the scope of the report for each quadrant and limits the maximum of providers per quadrant to 25 (exceptions are possible).

Provider Classifications: Quadrant Key

Product Challengers offer a product and service portfolio that reflect excellent service and technology stacks. These providers and vendors deliver an unmatched broad and deep range of capabilities. They show evidence of investing to enhance their market presence and competitive strengths.

Leaders have a comprehensive product and service offering, a strong market presence and established competitive position. The product portfolios and competitive strategies of Leaders are strongly positioned to win business in the markets covered by the study. The Leaders also represent innovative strength and competitive stability.

Contenders offer services and products meeting the evaluation criteria that qualifies them to be included in the IPL quadrant. These promising service providers or vendors show evidence of rapidly investing in products/ services and follow sensible market approach with a goal of becoming a Product or Market Challenger within 12 to 18 months.

Market Challengers have a strong presence in the market and offer a significant edge over other vendors and providers based on competitive strength. Often, Market Challengers are the established and well-known vendors in the regions or vertical markets covered in the study.

★ **Rising Stars** have promising portfolios or the market experience to become a Leader, including the required roadmap and adequate focus on key market trends and customer requirements. Rising Stars also have excellent management and understanding of the local market in the studied region. These vendors and service providers give evidence of significant progress toward their goals in the last 12 months. ISG expects Rising Stars to reach the Leader quadrant within the next 12 to 24 months if they continue their delivery of above-average market impact and strength of innovation.

Not in means the service provider or vendor was not included in this quadrant. Among the possible reasons for this designation: ISG could not obtain enough information to position the company; the company does not provide the relevant service or solution as defined for each quadrant of a study; or the company did not meet the eligibility criteria for the study quadrant. Omission from the quadrant does not imply that the service provider or vendor does not offer or plan to offer this service or solution.

Procurement Operations Modernization Services

Who Should Read This Section

This report is valuable for service providers offering procurement operations modernization services to understand their market position and for enterprises looking to evaluate these providers. In this quadrant, ISG highlights the global market positioning of procurement service providers and offers in-depth insights into how they address enterprise clients' unique challenges. Enterprises can use this report to understand market dynamics, technology adoption and use cases, explore new capabilities with existing providers and evaluate new providers.

Procurement professionals

Should read this report to gain a detailed understanding of how leading procurement service providers are positioned in the global market, the strengths they bring and the emerging capabilities shaping procurement ecosystems. These insights can improve decision-making, enabling teams to improve process efficiency, optimize sourcing strategies and align operational plans with long-term business goals.

Chief procurement officers (CPOs)

Should read this report to understand the evolving procurement BPO landscape, including provider maturity, service breadth and innovation focus. By evaluating how providers address changing market expectations, CPOs can identify the right strategic partners to drive transformation, strengthen operational resilience and achieve measurable improvements in cost, compliance and value delivery across the procurement function.

Chief technology officers (CTOs)

Should read this report to gain clarity on technology developments reshaping procurement, including automation, analytics, AI, workflow orchestration and platform integration. The report analyzes how these developments enhance process visibility and performance. CTOs can use these insights to guide technology investment decisions, enable digital transformation agendas and support future ready procurement systems.

Digital professionals

Should read this report to understand how modern, data-driven digital solutions are redefining procurement operations through agility, intelligent automation and real-time insights. The report provides visibility into emerging digital trends, enabling teams to design and deploy scalable digital experiences that improve decision making, support enterprise-wide transformation efforts and ensure readiness to adapt to evolving market demands.

This quadrant assesses how providers modernize procurement by **unifying data, AI and automation** to create **governed, efficient and resilient operations** that improve cycle times, strengthen controls and enable measurable, scalable business outcomes.

Tarun Nathooram Vaid

Procurement Operations Modernization Services

Definition

This quadrant evaluates providers' ability to modernize enterprise procurement centered on AI-driven automation, predictive analytics and ESG integration to create agile, resilient and sustainable procurement ecosystems. Modernized procurement is a strategic enabler for sourcing and category management, ensuring seamless interoperability with SCM, ERP, finance and supplier networks. Providers offer end-to-end BPO and consulting services, emphasizing cloud orchestration, GenAI, risk modeling and ESG-aligned supplier management. Key capabilities include autonomous procure-to-pay, spend intelligence, strategic sourcing, contract management and compliance governance. Providers must address:

- How modernization builds resilient, ethical supply chains and enables real-time risk mitigation and supplier resilience?
- How does AI improve spend visibility and cost savings?

- How orchestration and ESG drive simplification and sustainability?
- How will providers support talent development and change management for successful tech adoption?

Providers need to offer capabilities for better transparency, traceability and standardization to auditable norms for ESG reporting.

Eligibility Criteria

1. **Core procurement BPO services** from Source to payment (S2P)
2. **Ability to modernize direct and indirect spend** using AI and analytics
3. **AI-enhanced automation**, including autonomous GenAI for decision support
4. **Cloud-native procurement modernization** with orchestration across ERP, SCM and finance
5. **Demonstrated cost savings and value creation** through predictive spend intelligence
6. **Integration of procurement technologies** with advanced AI, ML and workflow automation
7. **Operational intelligence** with real-time risk modeling and ESG metrics across procurement ecosystems
8. **Strong consulting portfolio** with **cocreation, design thinking** and **change management** support.

Procurement Operations Modernization Services

Observations

Providers of AI-driven procurement operations modernization services are integrating intelligent intake and document processing to eliminate manual work, speed cycle times and reduce errors in upstream sourcing and downstream procurement operations. They are also adopting agentic workflows to automate S2P operations as well as ML-based models to detect anomalies, enrich supplier and market intelligence, as well as refine forecasts. GenAI enhances insight quality, decision support and guided buying, while continuous learning loops improve accuracy, controls and operational effectiveness over time.

Providers are taking an AI-first, cloud-native transformation approach to procurement operations modernization through standardized data foundations, deployable accelerators and continuous innovation streams. They are responding to organizations' demand for moving away from isolated fixes to integrated, insight-led operations, which enhance

transparency, speed and compliance. Such operations also create a governed pathway toward scalable, autonomous procurement.

A key theme among leading procurement modernization approaches is the use of structured, maturity-based frameworks. These models diagnose functional, process and technology gaps, align strategy with measurable value and translate ambition into a sequenced transformation roadmap. They also integrate analytics, automation and AI to drive intelligent decision-making while redesigning operating models and governance. Their focus on continuous optimization, tighter data stewardship and scalable, insight-led execution leads to a more agile and future-ready procurement organization.

From the 51 companies assessed for this study, 27 qualified for this quadrant, with 12 being Leaders and two Rising Stars.

accenture

Accenture continues to witness one of the strongest growth rates in procurement services and has a market-leading team of experts supporting a large global client base across industries. It delivers advanced solutions in GenAI and agentic AI for procurement modernization.

Capgemini

Capgemini, supported by strong credentials in AI, analytics and automation, now pairs these strengths with WNS' procurement-specific tools and accelerators, making it one of the strongest market players with the ability to meet diverse modernization requests.

corcentric

Corcentric's integrated approach to procurement makes it an end-to-end service provider. Its procurement expertise, focus on AI-enabled solutions and consulting-led approach help it win modernization deals in this market.

Deloitte.

Deloitte leverages its strong business and technology consulting legacy, global team of procurement experts, AI-enabled tools and global delivery framework to maintain a differentiated position in the procurement transformation landscape.

Genpact combines its strong procurement heritage, a set of tech-powered tools, a proven record of transformational outcomes and a robust partner ecosystem supported with its practitioner-led approach continues to maintain strong growth momentum.

GEP offers domain-trained agents embedded in GEP SMART™, NEXXE™ and QUANTUM™, all orchestrated by GEP Qi. It also tailors procurement modernization capabilities by leveraging extensive category expertise and deep cross-industry experience.

Procurement Operations Modernization Services

HCLTech

HCLTech uses a consult-to-operate approach that integrates domain expertise, industry-specific accelerators and a broad partner ecosystem to drive measurable value for clients across industries. Its portfolio shows significant emphasis on offering AI-enabled procurement solutions.

IBM applies a technology-led procurement modernization approach, integrating platforms such as Aptio for spend transparency and Maximo for intelligent asset and supplier operations. Its consulting, cloud and industry solutions allow procurement modernization to remain tightly connected with adjacent enterprise functions.

Infosys offers integrated procurement modernization services that combine consulting, digital and managed services under an AI-first framework to optimize S2P operations. The company continued to witness strong revenue and client growth in 2025.

PwC delivers consulting-led procurement modernization spanning operating-model redesign, S2P digital enablement, category excellence and analytic and managed operations. It combines deep industry expertise and a partner ecosystem to offer comprehensive outcomes.

TCS uses a consult-to-operate framework that blends strategic advisory, operating model redesign and targeted technology enablement. Its modernization outcomes are closely tied to business objectives and regulatory requirements.

Tech Mahindra leverages Enate, its guided-buying tool and the Enate Orchestration platform to improve end-to-end visibility and operational control, faster workflows with no-code flexibility and better buying compliance experience.

Cognizant's (Rising Star) AI-first approach, cloud-native S2P platform and global delivery model focus on consistency and scale. These strengths make it a strong provider to watch in procurement modernization services.

ProcureAbility (Rising Star) offers a robust technology suite, including PureSpend, custom AI bots, contract analytics engines, spend classification models and cloud-native accelerators to enable data-driven procurement operations transformation.

“Capgemini stands out for its unified, AI-first procurement modernization portfolio integrating advanced analytics, GenAI platforms and global delivery strength to deliver scalable, data-driven S2P transformation with measurable operational impact.”

Tarun Nathooram Vaid

Capgemini

Overview

Capgemini is headquartered in Paris, France. It has more than 420,000 employees. In FY25, the company generated €22.5 billion in revenue. Post its acquisition of WNS, it delivers AI-, GenAI- and analytics-led procurement modernization by integrating its global transformation expertise with WNS’ proprietary platforms such as Category PRO and SmartRisk PRO. Its unified portfolio enhances S2P efficiency, spend visibility, compliance and supplier risk management, supported by scalable cloud-native operations and a global onshore, nearshore and offshore delivery model. The firm focuses on technology, applications, strategy and transformation capabilities to strengthen its procurement operations modernization services.

Strengths

Practical and result-oriented framework:

Capgemini leverages industry-agnostic procurement modernization frameworks powered by AI, GenAI and analytics to strengthen spend visibility, risk modeling and cloud-native orchestration across sectors such as manufacturing, healthcare, CPG and energy. Proprietary accelerators, including Capgemini’s RAISE™ (the enterprise-grade foundation for agentic AI), category playbooks, risk control towers and compliance toolkits, enable measurable value through cost reduction, policy adherence and ESG-aligned operational performance.

AI-agentic procurement engine:

Capgemini leverages an embedded agentic AI ecosystem, combining multiple AI agents across sourcing, contracting, risk and

procure-to-pay (P2P) to drive autonomous execution, predictive insights and real-time decision support. This AI and HI model accelerates cycle times, strengthens risk mitigation and elevates end-to-end procurement performance.

Focus on offering a unified view:

With WNS Procurement, Capgemini unifies spend, supplier, sourcing, contract and market data into a single AI-driven intelligence platform, offering predictive insights, automated classification and proactive risk signals. The platform’s connected data model strengthens category strategies, enhances transparency and elevates decision-making efficiency across procurement functions.

Caution

Even with Capgemini’s strong integration and AI capabilities, modernization success still depends heavily on the client’s data quality and legacy system readiness. Inconsistent data or fragmented architectures can slow automation rollout and limit the impact of advanced procurement tools.

Strategic Sourcing and Category Management Services

Who Should Read This Section

This report is valuable for service providers offering strategic sourcing and category management services to understand their market position and for enterprises looking to evaluate these providers. In this quadrant, ISG highlights the global market positioning of such procurement service providers and offers in-depth insights into how they address enterprise clients' unique challenges. Enterprises can use this report to understand market dynamics, explore new capabilities with existing providers and evaluate new service providers that can support their sourcing activities.

Procurement professionals

Should read this report to gain a detailed understanding of how leading procurement service providers are positioned in the global market, the strengths they bring and the emerging capabilities shaping procurement ecosystems. These insights can improve informed decision-making, enabling teams to improve process efficiency, optimize sourcing strategies and align operational plans with long-term business goals.

Chief procurement officers (CPOs)

Should read this report to understand the evolving procurement BPO landscape, including provider maturity, service breadth and innovation focus. By evaluating how providers address changing market expectations, CPOs can identify the right strategic partners to drive transformation, strengthen operational resilience and achieve measurable improvements in cost, compliance and value delivery across the procurement function.

Chief technology officers (CTOs)

Should read this report to gain clarity on technology developments reshaping procurement, including automation, analytics, AI, workflow orchestration and platform integration. The report analyzes how these developments enhance process visibility and performance. CTOs can use these insights to guide technology investment decisions, enable digital transformation agendas, and support future-ready procurement systems.

Digital professionals

Should read this report to understand how modern, data-driven digital solutions are redefining procurement operations through agility, intelligent automation and real-time insights. The report provides visibility into emerging digital trends, enabling teams to design and deploy scalable digital experiences that improve decision making, support enterprise-wide transformation efforts and ensure readiness to adapt to evolving market demands.

This quadrant examines providers' ability to **deliver intelligence-led sourcing and category strategies** that improve savings quality, speed and resilience through advanced analytics, market intelligence and continuous value management.

Tarun Nathooram Vaid

Strategic Sourcing and Category Management Services

Definition

This quadrant evaluates the providers' capabilities in strategic sourcing and category management enhanced by AI-powered analytics, ESG metrics and supplier collaboration to drive cost savings, resilience and long-term value. Strategic sourcing aligns supplier selection with business goals, focusing on total cost of ownership, risk and sustainability. Category management optimizes spend and supplier performance across direct and indirect categories with data-driven insights. Providers offer services such as AI category agents, ESG-aligned sourcing, real-time risk modeling and cross-functional integration. Core capabilities include spend analytics, supplier collaboration, category strategy, contract management and sustainability.

As procurement becomes a strategic business enabler, these services are vital for aligning spend with enterprise goals, mitigating risks and driving innovation.

Providers need to offer capabilities for better transparency, traceability and standardization to auditable norms for ESG reporting.

Eligibility Criteria

1. **Vision for end-to-end sourcing and category services** with vertical-specific optimization
2. **Agile and autonomous sourcing** to optimize the supplier base, cost, quality and continuity
3. **Category management** that delivers financial and operational value across direct and indirect spend
4. **Spend management excellence** with adaptability to dynamic business needs
5. **Cross-functional collaboration and stakeholder alignment** with sourcing strategies
6. **AI-driven market intelligence and predictive analytics** on supplier data and cost trends
7. **Advanced analytics** using ML, NLP and GenAI for decision support
8. **Technology implementation** across e-sourcing, SRM and contract management integrated with ERP/SCM
9. **Referenceable case studies** showing savings via AI, analytics and GenAI integration

Strategic Sourcing and Category Management Services

Observations

The narrative in the strategic sourcing and category management services market has shifted from *finding savings to securing advantage*. Providers globally are leveraging intelligence-led sourcing, but the winning approaches prioritize deal quality, speed and sustainable value. Use cases and provider strategies emphasize shorter bid cycles and stronger stakeholder alignment, but the most significant gains occur where categories are dynamically managed, and signals on cost drivers, supplier health and ESG thresholds translate into timely, defensible actions.

The most credible narratives link pipeline rigor to realized outcomes: structured playbooks, scenario simulations, cleansheet logic and disciplined benefits tracking that prevents leakage. Co-sourcing emerges as a pragmatic middle path, combining an advisory spine with scalable execution to expand addressable spend (including tail) without compromising governance. Verticalized strategies matter in volatile markets; standardized templates sustain pace in stable ones.

Net effect: sourcing is evolving into a continuous, data-tight discipline that protects savings, strengthens resilience and builds institutional confidence. Technology plays a pragmatic role: agents automate setup, summarization and award analysis at scale; analytics combine external indices with historical outcomes to prioritize waves; and category playbooks are verticalized (CapEx/MRO, clinical, asset-intensive). The focus remains on strategy, negotiation and stakeholder alignment, but throughput and consistency improve noticeably at the tactical level.

From the 51 companies assessed for this study, 27 qualified for this quadrant, with 11 being Leaders and two Rising Stars.

accenture

Accenture leads in sourcing and category management, offering end-to-end services to over 14 category domains. Its SynOps AI capabilities strengthen the sourcing cycle and embed a rigorous, responsible AI framework across the procurement function.

Capgemini

Capgemini has strengthened its sourcing intelligence by integrating Amplifi PRO and PIA+, delivering unified category, commodity, supplier and spend insights enriched with GenAI and predictive analytics. Its services embed one of the most robust sets of risk and ESG capabilities.

corcentric

Corcentric's sourcing and category management services blend advisory, managed sourcing, pre-negotiated supplier programs, strong spend analytics, disciplined sourcing execution and supplier performance governance to accelerate time-to-value, resilience and strong outcomes.

Deloitte.

Deloitte uses data-driven, insight-led category strategies and technology-enabled sourcing to improve speed, accuracy and value. Its integrated enterprise model strengthens governance, resilience and stakeholder alignment to deliver measurable, long-term sourcing impact.

Genpact combines deep category expertise with structured governance to deliver smarter sourcing. Its GenAI-led tools accelerate analysis, RFx, supplier discovery and tail-spend actions. Its advisory-to-execution model delivers strong outcomes, proven by major savings and efficiency gains-spend actions.

GEP leverages its deep category expertise, analytics-led execution capability, real-time intelligence, predictive insights and GenAI agents to enhance sourcing speed, negotiation outcomes, supplier discovery and risk sensing. Its strategies are adaptive and market-aligned.

Strategic Sourcing and Category Management Services

HCLTech

HCLTech combines deep category expertise with AI-led sourcing tools to accelerate RFx, enhance intelligence and improve compliance. Its consult-to-operate model delivers 4-7 percent savings, faster cycles, higher productivity and strong, measurable sourcing value.

IBM combines GenAI-led sourcing intelligence, integrated advisory execution and strong multi-platform ecosystem enablement to accelerate insights, optimize category strategies, enhance compliance, improve supplier performance and deliver scalable, tech-agnostic sourcing operations.

Infosys®

Infosys uses AI, GenAI and automation to speed sourcing cycles, unlock savings and optimize carbon impact. It uses an efficient four-layer framework that standardizes category strategy, governance and execution for stronger value delivery.

PwC strengthens sourcing through an outcome-led model, scalable managed services and strong ecosystem alliances, improving governance, compliance, supplier performance and value realization while reducing leakage and implementation risk across categories.

TCS brings structured category expertise, AI-driven sourcing acceleration and a consulting-led operating model to improve strategy, speed, compliance and outcomes. It enables higher value creation, stronger supplier performance, autonomous workflows and consistent savings.

ProcureAbility (Rising Star) boosts sourcing with proprietary frameworks, rich category assets and AI-driven analytics across spend, contracts and supplier risk. Its flexible models enable rapid scaling, faster execution and measurable gains in savings, productivity and responsiveness.

Wipro (Rising Star) delivers analytics-rich sourcing with deep category coverage, AI-driven insights and autonomous workflows that accelerate decision-making and expand savings. A consulting-led, governance-anchored model ensures compliance, ESG integration and measurable value realization.

Capgemini

“Capgemini advances its leadership with an AI-driven sourcing ecosystem strengthened by the WNS acquisition, unifying deep category intelligence, scalable frameworks and proactive risk insights to deliver resilient, data-led and sustainable sourcing outcomes.”

Tarun Nathooram Vaid

Overview

Capgemini is headquartered in Paris, France. It is an AI-powered global business and technology transformation partner. It has more than 420,000 employees. In FY25, the company generated €22.5 billion in revenue. Post WNS acquisition, its strategic sourcing and category management services for procurement leverage AI to optimize processes, enhance decision-making and support sustainable sourcing across all key industries. It delivers GenAI- and analytics-led procurement transformation by integrating its global transformation expertise with WNS Procurement's proprietary digital suite of AI-powered platforms, including Amplifi PRO, Pipeline PRO and Category PRO.

Strengths

AI-driven category intelligence: Capgemini strengthens sourcing intelligence by integrating WNS Procurement's Category PRO and unifying Amplifi PRO, SmartRisk PRO, Pipeline PRO and PIA+ to deliver consolidated category, supplier, commodity and spend insights powered by GenAI and predictive analytics. This enhances strategy design, speeds sourcing cycles, improves foresight and enables more autonomous, market-aligned recommendations with greater accuracy and contextual relevance.

Scalable sourcing frameworks: Capgemini applies WNS Procurement's NextGenPro methodology to deliver structured, industry-specific sourcing powered by AI-enabled playbooks, predictive levers and standardized governance. This modular framework

strengthens execution discipline, accelerates value delivery and ensures consistent sourcing outcomes with transparent performance management.

Advanced risk and ESG capabilities: Capgemini expands its resilience capabilities through SmartRisk PRO and ESG-embedded category strategies. These solutions provide continuous supplier-risk scoring, sustainability metrics and compliance controls, enabling proactive mitigation, improved supplier resilience and transparent decision-making. The strengthened ESG lens supports responsible sourcing and long-term value.

Caution

Capgemini can strengthen its sourcing impact by improving data quality, deepening supplier collaboration and aligning category strategies more tightly with business priorities. While these are common challenges, addressing these areas will help ensure its analytics-led sourcing model delivers faster, more consistent value realization.

Supplier Management and Contract Lifecycle Services

Who Should Read This Section

This report is valuable for service providers offering supplier management and contract lifecycle services to understand their market position and for enterprises looking to evaluate these providers. In this quadrant, ISG highlights the global market positioning of such procurement service providers and offers in-depth insights into how they address enterprise clients' unique challenges. Enterprises can use this report to understand market dynamics, explore new capabilities with incumbent providers and evaluate new service providers that can support their sourcing activities.

Procurement professionals

Should read this report to gain a detailed understanding of how leading procurement service providers are positioned in the global market, the strengths they bring and the emerging capabilities shaping procurement ecosystems. These insights can improve informed decision making, enabling teams to improve process efficiency, optimize sourcing strategies and align operational plans with long term business goals.

Chief procurement officers (CPOs)

Should read this report to understand the evolving procurement BPO landscape, including provider maturity, service breadth and innovation focus. By evaluating how providers address changing market expectations, CPOs can identify the right strategic partners to drive transformation, strengthen operational resilience and achieve measurable improvements in cost, compliance and value delivery across the procurement function.

Chief technology officers (CTOs)

Should read this report to gain clarity on technology developments reshaping procurement, including automation, analytics, AI, workflow orchestration and platform integration. The report analyzes how these developments enhance process visibility and performance. CTOs can use these insights to guide technology investment decisions, enable digital transformation agendas and support future ready procurement systems.

Digital professionals

Should read this report to understand how modern, data-driven digital solutions are redefining procurement operations through agility, intelligent automation and real-time insights. The report provides visibility into emerging digital trends, enabling teams to design and deploy scalable digital experiences that improve decision making, support enterprise-wide transformation efforts and ensure readiness for evolving market demands.

**Procurement Services
Supplier Management and Contract Lifecycle Services**

Global 2026

This quadrant evaluates providers' ability to manage suppliers and contracts through continuous **risk sensing, performance governance and AI-enabled contracting** to improve compliance, reduce leakage and strengthen commercial and operational resilience.

Tarun Nathooram Vaid

Supplier Management and Contract Lifecycle Management

Definition

This quadrant assesses providers' expertise in supplier and contract lifecycle services, including performance and relationship management, onboarding/offboarding, contract administration, change order negotiation, centralized CLM, compliance, TPRM and ESG/DEI tracking. These services optimize vendor value, reduce risks and enhance procurement outcomes. Providers now leverage agentic AI, GenAI and predictive analytics for smarter contract insights, risk scoring and autonomous decision-making. Cloud-native CLM/Supplier relationship management (SRM) platforms enable real-time collaboration, mobile access and contextual intelligence, improving efficiency, compliance and supplier engagement. ESG-linked clauses and AI-driven risk modeling are becoming standard, ensuring resilience and sustainability across supplier ecosystems.

Providers need to offer capabilities that enhance transparency, traceability and standardization to auditable norms for ESG reporting.

Eligibility Criteria

1. **End-to-end supplier and contract lifecycle management capabilities**
2. **Robust risk and compliance management**, including supplier performance and regulatory monitoring
3. **Integration with ERP, SCM, finance and CLM/SRM platforms** for seamless data flow
4. **Use of AI, ML and GenAI** to automate processes and uncover insights
5. **Application of emerging technologies**, such as blockchain, to enhance contract transparency and traceability
6. **Delivery of tangible benefits** such as cost savings, improved collaboration and strategic decision-making
7. **Inclusion of ESG-linked contract clauses and supplier diversity tracking**
8. **Real-time supplier risk modeling** and contextual intelligence for proactive management
9. **Referenceable case studies** demonstrating measurable improvements in supplier and contract outcomes.

Supplier Management and Contract Lifecycle Management

Observations

This year's provider responses reveal a huge shift from periodic supplier performance checks to real-time insights. Programs that moved beyond onboarding hygiene into continuous risk sensing and performance governance reported fewer surprises and quicker corrective actions. Organizations gained from fewer supply interruptions, better commercial adherence and improved transparency across tiers. Also, ESG no longer remains a mere checkbox but a routing signal that influences segmentation, remediation and renewal decisions.

A clear pattern is emerging in contracts: digitalization reduces ambiguity. Where clause standards, fallback logic and obligation tracking are adopted, cycle times decrease and commercial integrity improves. The most grounded cases connect contract lifecycle management (CLM) to sourcing and supplier performance so that obligations inform scorecards, and scorecards influence renegotiation. Although AI assists, credibility relies on auditable trails and blended reviews. The operative outcome is leakage prevention and renewal discipline, and not just faster

redlines. In regulated or high-risk environments, this coherence becomes a resilience multiplier. Contract intelligence is shifting from OCR to clause and risk orchestration with multilingual support; SRM is expanding beyond scorecards to continuous surveillance (financial, operational, cyber and ESG) embedded into onboarding and renewals. Vendor assurance and reverification operate as governed routines rather than annual events, with exceptions escalated and obligations tracked to prevent leakage.

From the 51 companies assessed for this study, 26 qualified for this quadrant, with 11 being Leaders and two Rising Stars.

accenture

AI-led supplier governance, agentic contracting tools and large-scale S2P delivery enable **Accenture** to enhance data quality, automate compliance, accelerate contracting and deliver consistent, insight-driven category strategies supported by global expertise.

Capgemini

Capgemini offers an AI-driven stack (SKENSE, SmartRisk PRO and TrustHall) that automates CLM and supplier risk management, enhances data accuracy and governance, and unifies performance, compliance and relationship management, improving visibility, resilience and cost efficiency.

corcentric

Corcentric unifies advisory, AI-driven AP intelligence and integrated S2P/CLM to strengthen governance, risk visibility and financial control. Its insight-led approach streamlines sourcing, compliance, workflows and obligation tracking for faster, more controlled procurement.

Deloitte.

Deloitte delivers AI-enabled CLM and supplier management through alliances, leveraging AI for clause control, obligation insights and harmonized data. Its CLM framework boosts compliance and efficiency, while end-to-end supplier risk and sourcing capabilities strengthen resilience.

Genpact boosts procurement through Sievo-based spend insights, integrated CLM-SRM intelligence for faster, risk-aligned contracting and an AI gigafactory that scales agentic solutions to speed deployments, reduce costs and enhance overall value delivery.

Supplier Management and Contract Lifecycle Management

GEP unifies supplier oversight, AI-driven savings and ESG governance through SMART™, Qi and GREEN™, enabling real-time risk detection, adaptive AI agents, embedded emissions metrics and continuous, compliant, data-led supplier and contract management at scale.

HCLTech

HCLTech integrates end-to-end CLM with GenAI insights, advanced analytics and automation to improve compliance and reduce manual effort. Its PCC, AI tools and strong governance frameworks enhance visibility, accuracy, risk control and supplier performance.

IBM integrates watsonx-enabled contract intelligence, a broad partner ecosystem, and modern AI and GenAI, NLP and RPA to improve clause analysis, compliance, supplier risk insights and automation across sourcing, contracting and procurement operations.

Infosys provides AI-based supplier risk prediction, GenAI-enabled contract intelligence that speeds cycles and boosts compliance, and comprehensive CLM from strategy to managed services, supported by legal SMEs to ensure accuracy, governance and reliable outcomes.

TCS strengthens procurement with AI-driven supplier management via Cognix™, autonomous agentic workflows that speed RFx-to-PO cycles and an integrated consulting-to-operations model that boosts cost, compliance and supplier resilience.

Wipro's agentic AI automates supplier evaluation and risk scoring, while its GenAI platform accelerates contract tasks and compliance. The iSMRT system orchestrates digital agents to reduce manual effort and streamline sourcing and contract processes.

Cognizant (Rising Star) combines Neuro AI for safe GenAI deployment, a strong ERP/S2P/CLM partner ecosystem and a Source to Pay suite that unifies consulting, automation and analytics to streamline supplier onboarding, contract management and end-to-end procurement efficiency.

Tech Mahindra (Rising Star) delivers end-to-end SRM and CLM solutions with analytics and automation, supported by a holistic sourcing framework that enables measurable savings. Its ecosystem of tools strengthens contract control, compliance, transparency and supplier collaboration.

Capgemini

“Capgemini reinforces its leadership through a unified, insight-driven supplier and contract lifecycle model that blends advanced AI, domain expertise and global delivery, positioning it as a high-impact partner for resilient, compliant and value-focused supplier ecosystems.”

Tarun Nathooram Vaid

Overview

Capgemini is headquartered in Paris, France. It is an AI-powered global business and technology transformation partner. It has more than 420,000 employees. In FY25, the company generated €22.5 billion in revenue. Post WNS acquisition, it now delivers end-to-end capabilities strengthened by deep analytics, AI-enabled market intelligence and industry-specific expertise. Using platforms such as Amplifi PRO, Category PRO and SmartRisk PRO, it supports sourcing strategy design, execution, contracting and supplier optimization. Its blended AI+HI delivery model enhances savings, risk mitigation, ESG alignment and stakeholder experience across direct and indirect categories.

Strengths

Strong set of AI-driven tools: Capgemini unifies contract and supplier management through SKENSE, SmartRisk PRO and TrustHall, leveraging AI, ML and GenAI to automate contract data extraction, deliver real-time supplier risk intelligence and streamline end-to-end CLM workflows. This integrated digital stack reduces manual effort, accelerates processing, improves accuracy and enhances resilience across the supplier ecosystem.

Insight-led innovation advisory: Capgemini strengthens supplier and contract decision-making through intelligence-led advisory that blends continuous market, sustainability and regulatory insights with GenAI-driven risk signals and data governance frameworks.

This model enhances supplier data integrity, embeds proactive compliance and guides organizations toward resilient, future-ready supplier management and contracting strategies.

Integrated supplier governance:

Capgemini unifies supplier performance, risk, compliance and relationship oversight through SmartRisk PRO's continuous monitoring across financial, operational, ESG and governance factors. SKENSE automates contract data extraction to improve CLM accuracy, while TrustHall streamlines clause control and approvals. This integrated governance model accelerates onboarding and strengthens lifecycle transparency.

Caution

Capgemini should prioritize integrating WNS' proprietary tools, data models and delivery constructs into its consulting model, as full synergy may require a transition period. It should consider implementing a change management framework for clients with fragmented legacy landscapes to unlock full lifecycle benefits.

Appendix

The ISG Provider Lens® 2026 – Procurement Services study analyzes the relevant software vendors/service providers in the Global market, based on a multi-phased research and analysis process, and positions these providers based on the ISG Research methodology.

Information Services Group Inc. is solely responsible for the content of this report. Unless otherwise cited, all content, including illustrations, research, conclusions, assertions and positions contained in this report were developed by, and are the sole property of, Information Services Group Inc.

The research and analysis presented in this report includes research from the ISG Provider Lens® program, ongoing ISG Research programs, interviews with ISG advisors, briefings with service providers and analysis of publicly available market information from multiple sources. The data collected for this report represent information that ISG believes to be current as of April 2026 for providers that actively participated and for providers that did not. ISG recognizes that many mergers and acquisitions may have occurred since then, but this report does not reflect these changes.

All revenue references are in U.S. dollars (\$US) unless noted otherwise.

The study was conducted in the following steps:

1. Definition of Procurement Services market
2. Use of questionnaire-based surveys of service providers/ vendor across all trend topics
3. Interactive discussions with service providers/vendors on capabilities and use cases
4. Leverage ISG's internal databases and advisor knowledge & experience (wherever applicable)
5. Detailed analysis and evaluation of services and service documentation based on the facts & figures received from providers and other sources.
6. Use of the following key evaluation criteria:
 - * Strategy and vision
 - * Innovation
 - * Brand awareness and presence in the market
 - * Sales and partner landscape
 - * Breadth and depth of portfolio of services offered
 - * Technology advancements

IPL Product Owner

Jan Erik Aase
Partner and Global Head – ISG Provider Lens®/ISG Research

Mr. Aase brings extensive experience in the implementation and research of service integration and management of both IT and business processes. With over 35 years of experience, he is highly skilled at analyzing vendor governance trends and methodologies, identifying inefficiencies in current processes, and advising the industry.

Jan Erik has experience on all four sides of the sourcing and vendor governance lifecycle - as a client, an industry analyst, a service provider and an advisor. Now as a partner and global head of ISG Provider Lens®, he is very well positioned to assess and report on the state of the industry and make recommendations for both enterprises and service provider clients.

Provider Lens®

The ISG Provider Lens® Quadrant research series is the only service provider evaluation of its kind to combine empirical, data-driven research and market analysis with the real-world experience and observations of ISG's global advisory team. Enterprises will find a wealth of detailed data and market analysis to help guide their selection of appropriate sourcing partners.

ISG advisors use the reports to validate their own market knowledge and make recommendations to ISG's enterprise clients. The research currently covers providers offering their services across multiple geographies globally.
