

Capgemini contributes to EURO-3C, a European initiative advancing secure and interoperable digital infrastructure

As part of the Telefónica-led initiative supported by the European Commission, Capgemini is leading key architecture design, interoperability and data activities to help advance Europe's secure, interoperable and sovereign digital infrastructure

Paris, Madrid, September 17, 2026 – Capgemini today announced its contribution to **EURO-3C**, a major European initiative led by Telefónica and supported by the European Commission. The project aims to strengthen Europe's digital sovereignty and resilience through a federated infrastructure combining telecommunications, edge computing, cloud and artificial intelligence technologies. The consortium brings together 87 organizations from across Europe to advance the development of secure, interoperable digital services at scale.

EURO-3C aims to establish a federated, multi-operator and multi-vendor infrastructure spanning more than 70 edge and cloud nodes¹ across 13 European countries². The initiative is designed to support the delivery of secure, interoperable and high-performance digital services for strategic sectors including automotive, transport, energy and public services. By enabling real-time data processing and low-latency connectivity close to where data is generated, the network will support advanced applications ranging from connected and autonomous mobility to industrial automation and smart energy systems.

Within the consortium, Capgemini is leading the development of data sovereignty and interoperability capabilities, helping establish the trusted foundations required for secure data sharing across a federated European ecosystem. Drawing on its expertise in decentralized data spaces, the Group is embedding privacy, security and regulatory compliance by design. Capgemini is also contributing AI-powered capabilities to optimize edge resource management and support the convergence of network and computing infrastructure, enhancing performance while promoting the efficient and sustainable use of digital resources.

Building the foundations of Europe's sovereign digital infrastructure

Capgemini's participation in EURO-3C reflects a broader European collaboration bringing together telecom operators, cloud providers, technology companies, research organizations and industrial partners to lay the foundations for an open, secure and interoperable digital infrastructure for Europe. Through this collaborative approach, the initiative aims to strengthen Europe's digital sovereignty by reducing strategic dependencies and fostering innovation based on transparency, security and trusted data sharing. In doing so, EURO-3C seeks to lay the groundwork for advanced digital services and reinforce Europe's technological capabilities across critical segments of the digital value chain.

"As Europe explores new ways to strengthen its digital capabilities, initiatives such as EURO-3C highlight the value of collaboration across industry, technology and research ecosystems. By fostering interoperability, trusted data sharing and innovation, the project has the potential to support the development of secure and scalable digital services across Europe. Capgemini is proud to contribute its expertise in data sovereignty, interoperability and AI to this collective effort", said Andrea Falleni, CEO of Capgemini's Southern Europe region and Group Executive Board Member.

¹ Nodes: connection points, intersections, or junctions within the infrastructure of a cloud computing network.

² Spain, Germany, France, Netherlands, Finland, Norway, Poland, Italy, United Kingdom, Greece, Czech Republic, Romania, Sweden, Ireland, Belgium, Austria, Portugal, Switzerland.

About Capgemini

Capgemini is the business transformation partner for enterprises in the age of AI. We help organizations imagine and build an intelligent, sustainable future, combining AI, technology and human ingenuity to transform how they operate, innovate and grow. With unique end-to-end capabilities spanning strategy, technology, engineering and intelligent operations, we bring together deep industry expertise and market-leading capabilities in AI, cloud and data to turn ambition into measurable business outcomes at scale. Supported by a robust ecosystem of partners and nearly 60 years of expertise, Capgemini is a responsible and diverse global organization of over 410,000 team members in more than 50 countries. The Group reported 2025 revenues of €22.5 billion.
